Request for Proposals

Integrated Enterprise Software Systems and Implementation Services

RFP Issue Date:	**March 31, 2025**
Closing Date and Time:	**May 9, 2025, at 2:00 PM EST**

INTRODUCTION

Shenandoah County (County) desires to purchase or otherwise acquire rights to use an integrated Enterprise Resource Planning (ERP) System that meets the requirements identified in this Request for Proposal (RFP). The County requires that any proposal for an ERP also include professional services necessary to implement the system.

The County welcomes qualified solution vendors who can demonstrate their ability to furnish software and technical labor for the purchase and implementation of an integrated suite of Enterprise Software Systems. The proposal shall include software, technical labor, training, hardware (as needed), and ongoing support and maintenance that meet the County's business needs as described in this RFP 2025-002. Vendors may offer their proposed solutions for one (1) or more functional areas within the suite of Enterprise Software Systems. The County requires the inclusion of professional services necessary to implement the systems proposed in response to RFP 2025-002. The County will consider all cloud-based deployment options, which include Software as a Service (SaaS). The County intends to integrate the requested system, including all modules, with other current core systems as well as any future systems.

The County deems that there are two (2) primary systems and up to five (5) ancillary systems that comprise the suite of integrated enterprise solutions being requested as part of Shenandoah County RFP 2025-002. The primary systems should encompass modules for all functions detailed below.

a. **Financial Enterprise Resource Planning (ERP) System:** This solution should include accounts payable; expense reimbursement; accounts receivable; budget creation and adjustments; capital project management; fixed asset management; grants management; financial control including journal entry processing, bank reconciliation, cash management and investment management; purchase requisition and purchase order management; and procurement including solicitation management, contract management, change order management, and vendor management.
b. **Human Capital Management (HCM) System:** This solution should include recruitment and onboarding, time and attendance tracking, payroll and benefits administration, and employee management including position control, performance management, professional development, risk management, and policy compliance.

Additionally, Shenandoah County recognizes the potential advantages of procuring a stand-alone system for Budgeting, Taxation, Utility Billing, Time and Attendance, and/or Enterprise Land Management. The County will accept stand-alone proposals for these systems.

a. **Budgeting System**: A separate, best-of-breed system which supports budget creation and budget adjustments/amendments for the operating budget and the capital budget, including capital improvement planning.
b. **Taxation System**: A separate, best-of-breed system which supports property assessment, valuation, and tax billing and collection.
c. **Time and Attendance System**: A separate, best-of-breed system which facilitates time tracking.
d. **Enterprise Land Management System**: A separate, best-of-breed system which facilitates contractor licensing and permit application processing.
e. **Utility Billing System:** A separate, best-of-breed system that supports utility billing for water, sewer, and sanitation services and utility customer service.

Vendors are required to complete the ***Vendor Proposal Identification Schedule (Attachment 3)*** to identify on which of the Enterprise Software Systems within the scope of work for RFP 2025-002 they are offering.

The vendor selected for the primary system will be considered the primary vendor and will have the overall responsibility to integrate with all other systems, and any vendor selected for an ancillary system, if applicable, will be responsible for working with the primary vendor to ensure integration between systems.

In the event that a single vendor is unable to meet all requirements of RFP 2025-002, the County will allow vendors to partner with other firms to submit a joint proposal. If multiple firms partner to submit a joint proposal, the proposal must clearly identify one firm as the primary vendor, who will manage the contract. This primary vendor will be the primary point-of-contact throughout the procurement process. A primary vendor must also be identified for the implementation process. The primary vendor will be held responsible for the overall implementation of all partners included in the joint proposal.

It is important to note that vendors are free to submit responses without partnering with other vendors. Furthermore, vendors are free to submit responses for multiple solutions or for a single solution within the Scope of Work identified within RFP 2025-002.

Each proposal submitted in response to RFP 2025-002 shall include all costs, incidental or otherwise, including estimated travel costs, associated with the furnishing of software, hardware (as needed), end-user training, and technical labor for implementation services.

Vendors who plan to submit proposals in response to RFP 2025-002 must provide one (1) bound, signed, "ORIGINAL" copy and six (6) bound copies of the narrative proposal only. Respondents are not required to submit hard copies of attachments, appendices, or supplemental documents, which may be referenced in ***Section II - Proposal Response Guideline*** to indicate which sections are necessary for the hard-copy submission. The overall length of the narrative proposal, not including attachments, appendices, supplemental documents, or the Cost Proposal section, should not exceed 150 pages in 11pt Garamond font.

In addition to the hard-copy version of the proposal, vendors shall provide an electronic version of the complete proposal in non-editable, Adobe PDF format, labeled with the business name.

All hard copy proposals shall be submitted in a sealed envelope and marked in the lower-left corner: "**Sealed Proposals of (entity) – Implementation Services for Integrated Enterprise Software Systems**." Proposals must indicate the legal name, address, and telephone number of the party on the sealed envelope as well.

Additionally, the stand-alone Cost Proposal should be prepared and submitted in a separate, labeled, sealed envelope and digitally in .PDF and .XLSX format.

Proposals must be received by the Deputy County Administrator no later than **Friday, May 9, 2025, at 2:00 PM EST** at:

Shenandoah County
Attn: Mandy R. Belyea, Deputy County Administrator
600 North Main Street, Suite 102
Woodstock, Virginia 22664

Further, all electronic proposals, including all attachments, should be supplied on a flash drive and mailed to the Deputy County Administrator at the address above.

Any submittals received after the scheduled closing date and time will be disqualified in accordance with Commonwealth of Virginia law and Shenandoah County's purchasing policy.

An official authorized to bind the vendor must sign the original proposal copy. This solicitation does not commit Shenandoah County to award a contract, to pay any costs incurred in the preparation of a proposal or to procure or contract for the articles of goods or services.

Shenandoah County reserves the right to waive any informalities or irregularities, to accept or reject any or all responses, to negotiate with any or all qualified vendors, to award or refrain from awarding and to amend, revise or cancel in part or entirety this solicitation if it is in the best interest of the County to do so.

Vendors are recommended to check the County's website (**www.shenandoahcountyva.gov**) regularly for addenda, clarifications, and other notifications that may be pertinent to this process. All inquiries regarding the solicitation shall be directed to Mandy R. Belyea, Deputy County Administrator, in writing by e-mail at **mbelyea@shenandoahcountyva.us**. Communication by telephone or in person will not be accepted.

Mandy R. Belyea
Deputy County Administrator
Shenandoah County

I. GENERAL RFP INFORMATION

1. Definitions

Below is a list of critical, County-defined words and phrases that will play a vital role in the project's success. Qualified vendors should be familiar with these terms, and the requirements for each functional area, which appear in the Attachments section.

- **County** means Shenandoah County (Shenandoah County and County are used interchangeably within RFP 2025-002).
- **Vendor (or Firm)** means a software firm, company, or organization submitting a proposal in response to RFP 2025-002.
- **Contractor** means the selected vendor who will enter into the County's contract agreement for the scope of services within RFP 2025-002.
- **Enterprise Software System** describes an integrated software and technology solution designed to manage and streamline core business processes across an organization in real time. In the context of RFP 2025-002, Enterprise Software Systems include the systems defined below, which collectively support Shenandoah County's operational, financial, and administrative functions through seamless integration and interoperability.
    - ***Enterprise Resource Planning (ERP) System*** enables the integrated management of core business processes, in real-time, using software and technology. In the context of RFP 2025-002, ERP business systems include financial management functions that integrate with relevant human capital management (HCM) system functions, regardless of whether these functions are enabled by a single system or multiple separate systems.
    - ***Human Capital Management (HCM) System*** enables the integrated management of core human resources processes, in real time, using software and technology. In the context of RFP 2025-002, HCM business systems include human resources functions that integrate with relevant enterprise resource planning (ERP) system functions, regardless of whether these functions are enabled by a single system or multiple separate systems.
    - ***Time & Attendance System*** enables the integrated management of employee timekeeping and attendance processes, in real time, using software and technology. In the context of RFP 2025-002, Time & Attendance systems include time-tracking and scheduling functions that integrate with relevant enterprise resource planning (ERP) and human capital management (HCM) system functions, regardless of whether these functions are enabled by a single system or multiple separate systems.

- ***Budgeting System*** enables the integrated management of financial planning and budget preparation and adjustment processes, in real time, using software and technology. In the context of RFP 2025-002, Budgeting systems include forecasting, budget creation, budget amendment, and payroll budgeting functions that integrate with relevant enterprise resource planning (ERP) and human capital management (HCM) system functions, regardless of whether these functions are enabled by a single system or multiple separate systems.
- ***Utility Billing System*** enables the integrated management of utility account processes, in real time, using software and technology. In the context of RFP 2025-002, Utility Billing systems include meter reading, billing, accounts receivable, collections, account management, and customer service functions that integrate with relevant enterprise resource planning (ERP) system functions, regardless of whether these functions are enabled by a single system or multiple separate systems.
- ***Taxation System*** enables the integrated management of property tax assessment, billing, and payment processes, in real time, using software and technology. In the context of RFP 2025-002, Taxation systems include valuation, billing, collections, and payment processing functions that integrate with relevant enterprise resource planning (ERP) system functions, regardless of whether these functions are enabled by a single system or multiple separate systems.
- ***Enterprise Land Management (ELM) System*** enables the integrated management of land use, permitting, and zoning processes, in real time, using software and technology. In the context of RFP 2025-002, ELM systems include land development and permitting functions that integrate with relevant enterprise resource planning (ERP) system functions, regardless of whether these functions are enabled by a single system or multiple separate systems.

- **Functional Area** – A category encompassing any offices, departments, and divisions within Shenandoah County's organizational structure that are responsible for specific County functions and that will interact with the identified Enterprise Software Systems—including Enterprise Resource Planning (ERP), Human Capital Management (HCM), Budget, and Time & Attendance systems—within the scope of services defined in RFP 2025-002, with additional departmental systems specified in the definitions of the individual Functional Areas below.
  - ***Finance*** – Manages the County's financial operations including General Ledger, Financial Reporting, Payroll, Purchasing and Procurement, Accounts Payable, Accounts Receivable, Project and Grant Management, Budgeting, and Fixed Assets.
  - ***Human Resources*** – Manages the human resources lifecycle from recruitment to retirement, including Personnel Management, Benefits Administration, Performance Management, Professional Development, and Policy Compliance.

- ***Public Safety*** – Ensures the protection of all County residents and visitors through the Shenandoah County Department of Fire & Rescue, Shenandoah County Sheriff's Office (SCSO), and the Emergency Communications Center (ECC).
- ***Community Development*** – Manages comprehensive planning to meet the preservation and growth needs of Shenandoah County and will utilize the Enterprise Land Management (ELM) system as part of the scope of services defined in RFP 2025-002.
- ***Landfill & Recycling*** - Operates a landfill, a recycling center and twelve citizen convenience sites, responsible for Material Tracking and Billing.
- ***Parks & Recreation*** – Enhances the quality of life for the Shenandoah County community by providing recreational programs, facilities, and opportunities.
- ***Water & Sewer*** – Operates the Stoney Creek Sanitary District, the Toms Brook-Maurertown Sanitary District, and the North Fork Regional Wastewater Treatment Plant, performing duties that include Utility Meter Reading, Utility Billing, and Customer Service. In addition to the ERP system, this Functional Area will be utilizing the Utility Billing system as part of the scope of services defined in RFP 2025-002.
- ***Commissioner of the Revenue*** – Manages the assessment of real property, business property, and personal property for Shenandoah County, providing valuations for tax purposes. This Functional Area will utilize the Tax system as part of the scope of services defined in RFP 2025-002.
- ***Treasurer*** – Manages the County's Tax Billing, Delinquent Tax Collections, and Tax Payment Collection functions, and supports the County's financial operations, including receipts and disbursements of all County funds. This includes bank reconciliations, interest allocations, and investments. In addition to the ERP system, this Functional Area will utilize the Tax system as part of the scope of services defined in RFP 2025-002.

- **IBM Blueworks Live** is the business process modeler that the County utilizes to discover, document, and represent the critical business processes (AS-IS/Current State and TO-BE/Future State) of the County's functional areas within RFP 2025-002.
- **BPMN** stands for Business Process Model and Notation, a graphical representation for specifying business processes that IBM Blueworks Live applies.

2. RFP Objective

The purpose of RFP 2025-002 is to solicit proposals from qualified vendors capable of providing the organizational, functional, and technical expertise needed to procure and implement an integrated suite of Enterprise Software Systems. This suite must include all necessary software, training,

hardware (if required), and ongoing support services to achieve successful implementation and Go-Live.

The County seeks to modernize its operations through the implementation of an enterprise software suite that includes two (2) **primary systems** and up to five (5) **ancillary systems**. For the purposes of RFP 2025-002, solutions that handle the functionalities of a Financial ERP System and/or HCM system are considered primary systems. Ancillary systems include Budgeting, Time and Attendance, Taxation, Enterprise Land Management, and Utility Billing Systems.

_____ Financial ERP System

- Purchasing / Procurement
- Accounts Payable
- Accounts Receivable
- Controlling | General Ledger
- Treasury | Cash Management
- Capital Projects
- Expense Reimbursement
- Fixed Assets
- Grants
- Reporting

_____ Budgeting System

- Budget Creation
- Budget Amendment

_____ Utility Billing System

- Self Service
- Deposits
- Rate Configuration
- Meters and Meter Readings
- Billing
- Collections
- Customer Service
- Reporting

_____ Enterprise Land Management System

- Project Development
- Public Self-Service Portal
- Permitting
- Inspection
- Fee and Payment
- GIS Integration
- Reporting

_____ Human Capital Management System

- Recruiting
- Onboarding
- Employee Management
- Employee HR Self-Service
- Performance Management
- Risk Management
- Position Control
- Payroll
- Benefits Administration
- Reporting

_____ Time and Attendance System

- Time Tracking
- Leave Accrual
- Employee Self-Service Time Entry and Leave Requests

_____ Taxation System

- Real Property Tax
- Personal Property Tax
- Business Property Tax
- Property Assessments
- Tax Billing
- Tax Payment
- Delinquent Tax Collection
- Reporting

Vendors are encouraged to propose a single system that meets both primary and ancillary functionalities with a single comprehensive system. Vendors are also encouraged to propose a bespoke combination of interoperable systems that meet all the County's requirements. Vendors may propose a single solution that meets the requirements of both primary systems. Vendors may also submit proposals for a standalone primary system or a standalone ancillary system.

3. Scope of Work

The County is seeking an integrated suite of enterprise solutions that meets core requirements across all functional areas with minimal modifications. The overarching goal is to optimize system utilization, improve response times, reduce errors, automate manual processes, and enhance analytical capabilities. These improvements will support the County's ability to provide exceptional services to its residents while minimizing the total cost of ownership and maintaining high performance standards. The County also requires a solution that remains on an upgrade path with minimal cost and operational impact.

Through RFP 2025-002, the County intends to replace its existing financial system, BAI Municipal Software (BAI), with a proven, commercial-off-the-shelf (COTS) Financial ERP System as part of a fully integrated enterprise suite. The selected Financial ERP System must integrate seamlessly with the Human Capital Management (HCM) system or satisfy the requirements of both primary systems within a unified solution.

Vendors responding to RFP 2025-002 are required to demonstrate how their solution will integrate with the County's existing critical business systems, as outlined in ***Table 4.2.2 – Business Systems***, and with any ancillary systems selected by the County for functionalities such as Taxation, Utility Billing, Enterprise Land Management, Budgeting, and Time and Attendance.

Other vendors proposing ancillary or third-party solutions must provide detailed integration plans specifying how their systems will work with the selected primary system(s) to achieve a fully integrated enterprise suite.

All proposals submitted in response to RFP 2025-002 must include technical labor, software, hardware (if applicable), training, implementation, and integration services. All proposals must also include a detailed staffing plan and an estimate of required County staff involvement, including hours and roles for implementation and ongoing support.

4. About the County

Shenandoah County is a community of approximately 45,000 citizens located in the Shenandoah Valley of Virginia. The County provides a full array of local government services, including public safety, education, judicial administration, parks and recreation, library, solid waste, water and sewer, planning, zoning, building safety, health and human services, and general government administration services. The County has an annual budget of roughly $155 million and employs approximately 350 full-time employees and 350 part-time employees. Shenandoah County Public Schools is a separate entity and is not part of this RFP.

Shenandoah County operates under a traditional form of government, where the elected Board of Supervisors serves as the legislative body, setting policies and approving budgets. Each of the six members represents a district and is elected to staggered four-year terms. The County Administrator, appointed by the board, handles day-to-day operations and ensures policies are implemented efficiently. Regular public meetings are held to encourage community participation, and various advisory boards contribute to decision-making across key areas like planning and tourism

An overview of all functional areas is provided in **Section IV – Current Environment**.

Table 1.4.1 – Background Summary provides some specific details about the Shenandoah County departments within the scope of this endeavor.

Table 1.4.1 – Background Summary

BACKGROUND SUMMARY	
Population	45,000
Annual Operating Budget, FY 2024-2024	$165M
Approximate Number of Employees	700
Fiscal Year	July-June
Number of Departments and Offices	21
Number of Locations	23

The County primarily operates on a Windows-based infrastructure, including Office365 for office productivity and email services, and utilizes SQL databases for certain systems. Server operating systems are standardized to Windows 2016 or newer, while desktop systems are transitioning from Windows 10 to Windows 11. Desktop and laptop computers are mainly supplied by Dell, with some

devices from HP and Lenovo. The County uses only a few Android tablets in a limited capacity, running Neptune360 on these devices for utility meter reading.

The County's network infrastructure includes Dell switches, Aruba devices, and Sonicwall firewalls. The virtual environment is managed through VMware Esxi, and Solarwinds Service Desk serves as the HelpDesk ticketing system. Additionally, PDQ Deploy and Group Policy Objects (GPO) are used for image and application deployment.

The County's primary ERP solution is BAI Municipal Software; this system has been in place since the early 1990s. The following modules of the BAI Municipal Software are currently used by the County:

- BAI.NET
- Finance Modules
    - Financial Reporting (General Ledger)
    - Purchasing
    - Accounts Payable
    - Payroll
- Commissioner / Assessments Module
- Treasurer / Counter System Module
- Building Inspection Module

The County uses separate software programs for its Geographic Information System (GIS), real estate mass appraisal, debt management, utility billing, solid waste processing, and work orders for facility maintenance, further described in detail in ***Section IV – Current-State Environment (As-Is)*** of RFP 2025-002.

In addition to the aforementioned software applications, the County continues to use manual, paper-based processes, or other applications, such as Microsoft Excel, Microsoft Word, and Quicken | QuickBooks, as workarounds and shadow systems to augment the limitations and inefficiencies of existing legacy systems. For example, many of the County's financial documents, including the annual budget, capital improvement plan, and Annual Comprehensive Financial Report, are prepared using Microsoft Excel and Word. Human resource management, including time and attendance tracking, is primarily performed through manual, paper-based processes and Microsoft Excel.

5. Physical Location & Website

The County's website is **www.shenandoahcountyva.gov**. There is one (1) principal location of the organization:

600 North Main Street, Suite 102
Woodstock, Virginia 22664

II. PROPOSAL RESPONSE GUIDELINE

Shenandoah County invites proposals from qualified vendors for the procurement and implementation of an integrated suite of enterprise solutions encompassing Finance, Human Resources, Taxation, Utility Billing, and Enterprise Land Management. Vendors are encouraged to submit proposals that address all functional areas or focus on specific areas, provided that the solutions align with the County's integration and operational requirements.

To ensure the fairness of proposal evaluations, vendors must assemble their proposals in strict adherence to the submittal requirements identified in this section and following the formats required by all parts within ***Section II — Proposal Response Guideline*** of RFP 2025-002. Failure to comply with all organizational proposal requirements will result in the proposal being declared nonresponsive. Proposals should be prepared as simply as possible and provide a straightforward, concise description of the proposed products and services to satisfy the requirements of the RFP 2025-002. Attention should be given to accuracy, completeness, relevance, and clarity of content. Proposals must address all requested sections, and they must be presented in the same order.

1. Anticipated RFP Schedule

Table 2.1.1 – RFP Schedule of Events represents the County's anticipated schedule that will be followed for receiving and evaluating the proposals as well as selecting system vendors for this procurement/implementation.

Table 2.1.1 – RFP Schedule of Events

RFP EVENT		DATE / TIME
1	Request for Proposal Issue Date	Monday, March 31, 2025, 2:00 pm EST
2	Pre-Proposal Conference	Monday, April 14, 2025, 2:00 pm EST
3	Deadline for Written Questions	Friday, April 18, 2025, 5:00 pm EST
4	County Response to Written Questions	Friday, April 25, 2025, 5:00 pm EST
5	Deadline for Submitting Proposals	Friday, May 9, 2025, 2:00 pm EST
6	Vendor Short List Identified	Tuesday, May 27, 2025, 5:00 pm EST
7	Oral Presentations / System Demonstrations	June 16, 2025 – July 12, 2025
8	Site Visits (Optional)	Monday, July 14, 2025 – July 26, 2025
9	Due Diligence | Vendor Selection	Monday, July 14, 2025 – Thursday, July 31, 2025
10	Contract Negotiations with Finalist Vendor(s)	Friday, August 1, 2025 – Sunday, August 31, 2025
11	Contract Award (Notice of Award)	Friday, September 5, 2025
12	Contract Execution	*TBD **

** Due to the complex nature of this solicitation, Shenandoah County may award contracts to multiple enterprise software vendors and/or multiple implementation service providers. Contracts may be executed concurrently or according to a phased implementation timeline, to be determined, at the County's discretion.*

Shenandoah County reserves the right, at its sole discretion, to adjust this schedule, as it deems necessary. Notification of any adjustment to the RFP Schedule of Events for RFP 2025-002 will be provided in the form of an "Addendum," which will be posted on the County's website:

https://shenandoahcountyva.us/bids.aspx

It is the proposing vendor's responsibility to check regularly for addenda, clarifications, and other notifications that may be pertinent to this process.

The RFP and subsequent evaluation of proposals will allow the County to identify a Short List of vendor finalists. The Short-Listed vendors will be invited to complete an on-site (Shenandoah County) system demonstration and oral presentation. Upon the completion of the system demonstrations, the County intends to identify the final vendors.

The scripted system demonstration is not intended to be a generic demonstration of the application, but rather a demonstration of specific product functionality deemed most critical to the County. Vendors must be prepared to invest time and resources in the system demonstration to be successful with this procurement. The County will provide the agenda, demonstration scripts, use cases, and other relevant information before the scheduled demonstration.

The County expects that the foundational/basic functionality (stated in RFP 2025-002) will be demonstrated along with any need for customization. The County intends to negotiate final agreements upon the selection of the vendor finalist for each of the components noted in ***Section I*** of RFP 2025-002. If the finalist's solution fails to satisfy the needs of the County or the parties are unable to come to terms on an agreement, the County will proceed with the next highest scoring vendor.

2. RFP Coordinator

All communications (questions, concerns, and protests) concerning RFP 2025-002 must be submitted in writing (via email) directly to the RFP Coordinator identified below at the email address provided. The RFP Coordinator will be the single point of contact for RFP 2025-002. The RFP Coordinator's contact information is as follows:

- **Contact**: Mandy R. Belyea – Deputy County Administrator
- **Email**: mbelyea@shenandoahcountyva.us

Vendor contact with anyone else in the County is expressly forbidden and may result in disqualification of the vendor's proposal. Communication by telephone or in person will not be accepted.

2.1. Vendor Requests for Additional Information

Requests for information regarding Shenandoah County services, programs, or personnel, or any other information shall be submitted in writing directly to the Deputy County Administrator at the address/email provided. All requests for additional information shall be submitted in writing. Answers shall be provided to all prospective vendors through the County's website on or before the date specified above for the County's response to written questions and comments.

3. RFP 2025-002 Proposal Preparation Costs

The County will not pay any costs associated with the preparation, submittal, or presentation of any proposal or vendor demonstration.

4. RFP General Requirements

The vendors responding to RFP 2025-002 must adhere to the following Shenandoah County requirements:

a) **Contingencies** – This RFP does not commit the County to award a contract. The County reserves the right to accept or reject any or all proposals if the County determines it is in its best interest to do so. The County will notify all vendors, in writing, if the County rejects all proposals.

b) **Disclosure of Proposal Contents** – Ownership of all data, materials, and documentation originated and prepared for the County pursuant to the RFP shall belong exclusively to the County and be subject to public inspection in accordance with the Virginia Freedom of Information Act. Trade secrets or proprietary information submitted by an Offeror shall not be subject to public disclosure under the Virginia Freedom of Information Act; however, the Offeror must invoke the protections of § 2.2-4342F of the Code of Virginia, in writing, either before or at the time the data or other material is submitted. The written notice must specifically identify the data or materials to be protected and state the reasons why protection is necessary. The proprietary or trade secret material submitted must be identified by some distinct method such as highlighting or underlining and must indicate only the

specific words, figures, or paragraphs that constitute trade secret or proprietary information. The classification of an entire proposal document, line-item prices, and/or total proposal prices as proprietary or trade secrets is not supported by law.

c) **Legal Compliance** – By submitting a proposal, the vendor agrees to comply with the Fair Labor Standard Act, Title VI of the Civil Rights Act of 1964, Executive Order 11246 (as amended), Fair Employment Practices, Equal Employment Opportunity Act, Americans with Disabilities Act, and Virginia Code.

5. Vendor Minimum Qualifications

The vendor must submit proposals that demonstrate and provide evidence that the vendor has the full spectrum of capabilities, experience, professional staff, and expertise to deliver the products and perform the professional services described in RFP 2025-002. The vendors responding to this RFP must:

a) Offer technical implementation services, integration services, and training for one or more of the requested Enterprise Software Systems:
- Financial ERP System
- Human Capital Management System
- Budgeting System
- Time and Attendance System
- Utility Billing System
- Taxation System
- Enterprise Land Management System

b) Have a minimum of five (5) years of experience providing the requested software and services.

c) Have a minimum of five (5) successful system implementations in other organizations, including three (3) of which are for municipalities that are comparable in size to Shenandoah County, and one (1) of which is an organization based in Virginia.

d) Have sufficient, competent, and skilled staff, with experience in performing the requested services.

e) Have the necessary credentials, licensures, etc. (if applicable) that govern the software and services provided and adhere to all applicable local, state, and federal laws.

f) Be able to provide the services confidentially and professionally.

g) Provide proof of the minimum insurance requirements (detailed provided in ***RFP Section VIII – General Terms and Conditions***).

h) Submit their most recent audited financial statements.

6. Proposal Submittal

Proposals must conform to the requirements outlined in the RFP 2025-002. Proposals not conforming to these guidelines may be rejected as non-responsive. Hard copy proposals may be submitted by mail or by hand delivery. The single electronic copy should be submitted to the email address listed below. Only those proposals which are complete and delivered (both electronic and physical copies) to the County by the Deadline for Proposal Submission, as defined above, will be considered.

Proposals must be submitted no later than **May 9, 2025, at 2:00 PM EST** to:

- **Address:** Shenandoah County
  Attn: Mandy R. Belyea, Deputy County Administrator
  600 North Main Street, Suite 102
  Woodstock, Virginia 22664
- **Email:** mbelyea@shenandoahcountyva.us

Vendors who plan to submit proposals in response to RFP 2025-002 must provide one (1) bound, signed, "ORIGINAL" copy and six (6) bound copies of the narrative proposal only. Respondents are not required to submit hard copies of attachments, appendices, or supplemental documents, which may be referenced in ***Section II - Proposal Response Guideline*** to indicate which sections are necessary for the hard-copy submission. The overall length of the narrative proposal, not including attachments, appendices, supplemental documents, or the Cost Proposal section, should not exceed 150 pages in 11pt Garamond font.

In addition to the hard-copy version of the proposal, vendors shall provide a flash drive with an electronic version of the complete proposal in non-editable, Adobe PDF format, labeled with the business name.

All hard copy proposals shall be submitted in a sealed envelope and marked in the lower-left corner: "**Sealed Proposals of (entity) – Implementation Services for Integrated Enterprise Software Systems**." Proposals must indicate the legal name, address, and telephone number of the party on the sealed envelope as well.

Additionally, the stand-alone Cost Proposal should be prepared and submitted in a separate, labeled, sealed envelope and digitally in .PDF and .XLSX format.

7. Submittal Requirements

Proposals shall be prepared to satisfy the requirements of RFP 2025-002. Emphasis should be placed on the accuracy, completeness, and clarity of content. All parts, pages, figures, and tables should be numbered and labeled clearly. ***Table 2.7.1 – Proposal Format*** details how the Proposal should both be organized and ***Table 2.7.2 – Cost Proposal Format*** details how the Cost Proposal should both be organized:

Table 2.7.1 – Proposal Format

SECTION	TITLE	FORMAT
1	Transmittal Letter	Digital *and* Paper Copy
2	Vendor Proposal Identification Schedule	Digital *and* Paper Copy
3	Executive Summary	Digital *and* Paper Copy
4	Vendor Qualifications	Digital *and* Paper Copy
5	Proposed Solution(s)	Digital *and* Paper Copy
6	Staffing Plan	Digital *and* Paper Copy
7	Implementation Plan	Digital *and* Paper Copy
8	Ongoing Support Services	Digital *and* Paper Copy
9	Deliverables and Project Outcomes	Digital *and* Paper Copy
10	Client References	Digital *and* Paper Copy
11	Exceptions and Deviations	Digital *and* Paper Copy
12	Vendor Contract Samples	Digital Only
13	Other Required Forms and Attachments	Digital Only
14	Functional System Requirements	Digital Only (.XLSX and .PDF)

Table 2.7.2 – Cost Proposal Format

SECTION	TITLE	FORMAT
1	Cost Proposal (Separate, Stand-Alone Document)	Digital (.XLSX and .PDF) *and* Paper Copy

Instructions relative to each part of the response to RFP 2025-002 are defined in the remainder of this section.

7.1. Transmittal Letter (Proposal Section 1)

The vendors shall include a Transmittal Letter and expression of interest in the project. The vendors should indicate a willingness to enter into a contract with the County and meet the requirements of RFP 2025-002, including insurance requirements. The Transmittal Letter shall also name the person(s) authorized to represent the vendors in any negotiations with the name and title of the

person(s) legally authorized to sign any contract that may result. The letter must be signed by the vendor's authorized representative, and include the email address, and telephone number. Moreover, the Transmittal Letter must indicate the system solution(s) the vendors would like to offer within RFP 2025-002. Proposal Section 1 should not exceed two (2) pages.

7.2. Vendor Proposal Identification Schedule (Proposal Section 2)

Vendors are required to complete the ***Vendor Proposal Identification Schedule (Attachment 3)*** to identify which of the two (2) Enterprise Software Systems within the scope of work for RFP 2025-002 for which they are submitting a proposal.

7.3. Executive Summary (Proposal Section 3)

The vendors shall include an Executive Summary as a brief narrative describing the proposed solution(s) being offered by the vendors. The summary should contain minimal technical jargon and should be oriented toward non-technical personnel. The Executive Summary should not include cost quotations. Proposal Section 3 should not exceed five (5) pages.

7.4. Vendor Qualifications (Proposal Section 4)

The vendors shall address minimum vendor qualifications as previously detailed in ***Vendor Minimum Qualifications*** in RFP 2025-002 and may also include additional information. This evaluation component will allow the County to assess the vendors' qualifications and determine the vendors' stability as well as the ability to support the commitments outlined in their proposal.

7.5. Proposed Solution(s) (Proposal Section 5)

The vendors shall provide a general description of the Proposed Solution(s), as well as technical aspects and how they will meet the requirements of RFP 2025-002. This section must address, at a minimum, the following items:

a. Describe the vendor's overall proposed technology solution(s).
b. Describe the product direction for the company, including time frames.
c. Describe unique aspects of the vendor's solution(s) in the marketplace.
d. Describe components of the solution(s) that are industry-standard versus proprietary to the vendors.
e. For third-party products proposed that are integrated with the vendors' solution(s), provide the following item for each product:
    - The reason that this product is a third-party product versus being part of the vendors' software solution(s);
    - The extent to which this third-party product is integrated with the vendors' solution(s).

f. Storage Environment
   - Please describe how the County's critical data will be stored and kept safe, the backup process, the upgrade process, and all other aspects of the solution(s) offering. Detail the County's options to access or retain data for the long term. Also, break down responsibilities that the vendor owns and those that are owned by the County.

g. Hardware
   - Describe any hardware proposed to support the end-user in operating the solution(s).

7.6. Staffing Plan (Proposal Section 6)

The vendors shall provide a Staffing Plan, including the designation of the Principal or Project Manager, who will have direct and continued responsibility for the project. This single-point-of-contact will be the County's vendor contact on all matters dealing with the project and will handle the day-to-day project management activities through completion. The vendor must detail all personnel assigned to the proposed implementation team, including a listing of their individual job responsibilities for this project. If the vendors are using subcontractors, please include information on subcontracting staff being used and their specific role on the project. The vendor will be responsible for verifying the experience and qualifications for any outsourced work to sub-contractors. The vendor is also responsible for paying its employees and any subcontractors the vendor hires. Resumes should be included for all personnel that will be assigned to the project.

- **Project Manager Qualifications:**
  - Be a permanent employee of the firm.
  - Oversee all aspects of the project.
  - Serve as the constant primary point of contact for the County.
  - Minimum of ten (10) years of relevant experience.

- **Key Team Members Qualifications:**
  - Minimum of five (5) years of relevant experience.

The vendors shall also provide an overall project management approach, including a project organizational structure, which identifies anticipated County staff involvement during the project. Identify the roles and responsibilities of each component of this structure.

7.7. Implementation Plan (Proposal Section 7)

The vendors shall provide an implementation plan in a narrative format that details how the proposed solution(s) is to be implemented, supported by an activity level project plan. This comprehensive implementation plan should include the following elements:

a. General Implementation Approach
b. Data Conversion Plan
c. Report Development
d. Integration and Interfaces
e. Testing
f. Training
g. System Documentation and Manuals

The vendor should not be constrained to only include the above items in the proposal response if the provision of additional elements may add value to the overall implementation.

The County prioritizes maintaining business continuity throughout the implementation process and requires vendors to account for this in their proposed plans. The timeline and sequencing of implementation phases will be determined collaboratively with the selected vendor(s) to align with County priorities and ensure minimal disruption to operations.

a. General Implementation Approach (Proposal Section 7a)

The vendors shall provide a general overview of the proposed implementation approach intended for use at the County that includes addressing the following items:

- Describe the approach for transition from the sales cycle to the implementation phase of the project, including any pre-implementation planning.
- Describe the project methodology as it relates to implementing a solution on time, within the proposed budget, and with the ability to meet the unique needs of a public sector client like the County.
- Describe your approach to phasing the implementation of proposed solution(s), by functional area. What is your recommended approach for this implementation? Describe the expected level of engagement with County staff.

Vendors should propose a flexible implementation approach that accounts for the County's need to maintain operational continuity. While the County may prioritize foundational systems initially, the final sequencing and timeline will be established based on the proposed solutions and collaborative planning with the selected vendor(s).

Any unique tools, techniques, or methods that the vendors intend to use related to the implementation should be described in this section.

b. Data Conversion Plan (Proposal Section 7b)

The vendors shall provide a Data Conversion Plan for assisting the County in the conversion of both electronic and manual data to the new system. It is anticipated that the County will be responsible for data extraction from current systems and data scrubbing and data pre-processing and that the vendors will be responsible for overall data conversion coordination, definition of file layouts, and data import and validation into the new solution(s). Please describe:

- Your general approach towards data conversion and how you would work with the County to conclude on what should be converted;
- Your recommended approach toward retention of legacy data.

c. Report Development (Proposal Section 7c)

The Vendor shall provide an approach to addressing Report Development related to the proposed solution(s). For specific reporting requirements, it is anticipated that the vendors will take the lead on developing any reports required as part of the initial deployment of the system. The vendor is expected to provide specialized knowledge and information to the County staff during the development of needed reports, via technical training on the tools used for report development. Provide information on your reporting approach, including:

- Description of various methods of reporting including any ad-hoc business intelligence capabilities;
- Methods for the County to identify, specify, and develop required custom County reports during the implementation and a method for the County to create reports post-implementation.

d. Integration and Interfaces (Proposal Section 7d)

The vendors shall provide a plan for Integration and Interfaces. It is expected that an end-user would generally need to enter data once into the systems, and that information would be accessible across systems in real-time due to integrations. Modules within the systems should be integrated in real-time with each other such that batch processes are not required to transfer information from one area of the systems to another. The vendor *must* comply with the information contained in ***Attachment 1 (System Requirements)*** to meet the County's business needs.

Additionally, please describe the following items:

- The extent to which the various modules are integrated versus being purchased separately and interfaced;

- Your approach towards interfacing and integration with other solutions including the use of specific tools, methods, and standards;
- Data exchange standards (e.g., XML, Web Services, or EDI) supported or provided by your software;
- Potential issues for integrating with specific technologies that are used within the County;
- Potential tools or assistance to easily incorporate customizations into new versions/releases of your software, if local customizations are made.

e. Testing (Proposal Section 7e)

The vendors shall describe their recommended approach to the following types of testing that are anticipated to be performed as part of the implementation phase of the project, along with the level of County staff engagement in the Testing process:

- System testing
- Integration testing
- Stress/performance testing
- User Acceptance Testing (UAT)

f. Training (Proposal Section 7f)

The vendors shall provide the County with training programs to assure all end-users understand the core functionality of the solution(s) and can execute the associated workflows.

It is important to note that the County intends to explore the advantages, disadvantages, and related costs of the following two (2) implementation training approaches:

- ***End-user Training Approach***: All end-user and technical training will be performed on-site through implementation and be performed by the vendors.
    - End-user implementation training will be provided by the vendors and include joint participation by the relevant County process owners supporting the process area in the new software systems.
    - Technical Implementation training will include training for County IT staff on the technologies and processes required to support the new solution(s).
- ***Train the Trainer Approach***: The vendor will incorporate a “train the trainer” approach where only crucial County team leaders will be trained through implementation on their modules, and then they will train the remainder of the County staff in their respective areas.

- There would be departmental representatives who would need to be trained on each module who would then train users in their respective departments to use the module for department-specific use cases. This training will be provided at a County facility.
- Training materials supplied by the vendors would be used by departmental representatives for training their staff.
- Web conference or remote online tutorial sessions would be available to departmental representatives to participate in after initial training was completed in the relevant modules.
- Technical Implementation training would include training specific departmental representatives who would be expected to support the new systems with escalation support from the vendor's Help Desk services and the County's IT resources.

The vendors shall provide an overall description of both training methods, including the following:

- General timeframes in which both types of training will be conducted
- The vendor must list the nature, level, and amount of training to be provided for both options in each of the following areas:
  - Technical training (e.g., programming, operations, etc.)
  - User training
  - Other staff (e.g., executive-level administrative staff)

g. System Documentation and Manuals (Proposal Section 7g)

The vendors shall provide user manuals and online help for use by the County as part of the initial training and on-going operational support. Additionally, the vendor is expected to provide technical documentation.

- Describe what documentation (user guide, a technical guide, training materials, online resources, etc.) is readily available as part of the proposed solution(s). Any related costs should be identified in the Total Project Cost (Proposal Section 10).
- Describe what types of documentation you anticipate developing during the project.

7.8. Ongoing Support Services (Proposal Section 8)

The vendors shall specify the nature and conditions of any post-implementation support options, including:

- Post-go live support that is included in the proposal response
- Onsite support (e.g., system tuning, application configuration, interface issues, report development, network optimization, user training and tips to optimize the user experience)

- Help Desk services (If there is a service level agreement for your help desk, please provide a digital copy with your RFP response.)

The vendors shall also describe the "Software as a Service" Service Level Agreement and options with associated pricing referenced in the Cost Proposal if applicable. The County requests that any "Software as a Service" (SaaS) Service Level Agreement (SLA) documents be delivered in digital format only. Full-length SaaS SLA documents and other contract documents should not be included in the paper copies of the proposals.

In addition to the above, vendors shall clearly demonstrate that post-implementation support includes ongoing cybersecurity measures in compliance with Shenandoah County's security expectations and Information Security Program (see ***Section VII – Information Security Requirements, Disaster Recovery, and Data Retention***) including:

- Participation in periodic security reviews, penetration testing, and vulnerability assessments
- Coordination of an incident response plan with breach notification (within 24 hours)
- Regular service check-ins and performance reviews that address system availability, cybersecurity measures, and overall compliance.

7.9. Deliverables and Project Outcomes (Proposal Section 9)

The vendors shall review the topics and related questions below, selecting those that best showcase the unique value of the implementation services and enterprise software system(s) being proposed. Clearly restate the selected topics and respond to the selected prompts with concise narrative responses that illustrate the practical and measurable benefits of the proposed solution(s), including past client outcomes.

GENERAL CATEGORY

TOPIC 1. Legacy Systems – Custom Reporting Integrations and Data Extracts

- Shenandoah County relies on multiple legacy applications and requires the ability to extract data and generate custom reports from proprietary or hard-to-integrate formats. Provide an example of the firm's experience transitioning organizations away from complex, proprietary legacy systems. How did the implementation team build custom reporting integrations or data extraction processes that ensured reliable data migration and real-time data visibility during the transition and after the project's completion?

TOPIC 2. Best Practices for Phased Implementations (Order, Timeline, and Minimizing Disruption)

- The County plans implement multiple solutions (ERP, HCM, ELM, etc.) in phases to limit operational disruption across various locations and departments. Outline your recommended approach to phasing multiple enterprise software implementations (e.g., ERP first, then HCM, etc.), ensuring each phase delivers functional value without disrupting daily operations. Provide details about your approach to at least one real-world example of a phased rollout that included at least one best-of-breed solution, including key lessons learned, timeline benchmarks, and strategies used to keep projects on track.

TOPIC 3. Change Management Strategies Across Decentralized Departments

- Many departments operate independently in different physical locations; the County wants to foster user adoption and consistent processes across all sites. Describe your change management framework for rolling out a new, cloud-based system across diverse and decentralized departments. How does the proposed approach ensure buy-in, readiness, and effective user training for multiple sites that each have unique processes? Reference a real-world project in which the project team successfully navigated resistance to change in a similarly structured county or municipality, highlighting communication plans, training tactics, and measurable outcomes.

TOPIC 4. Access to Information

- With modern technology providing greater access to information, the County's employees and managers can better utilize information for decision-making. However, much of this relies on having technology that is truly accessible. Please identify how a past client used mobile features, dashboards, reporting tools, and self-service capabilities to create a source of information that is widely used across organizations.

TAXATION CATEGORY

TOPIC 5. Successful Virginia Tax System Implementations

- The County wants a proven solution with a strong record of meeting Virginia-specific tax requirements. Please describe a successful Taxation System implementation completed for a county in Virginia. Include details on key milestones, unique Virginia requirements addressed, and the real-world benefits realized by the county.

TOPIC 6. Replacing Legacy Taxation Systems Without Operational Disruption

- The County currently uses multiple BAI modules and wants to avoid interruptions in tax billing, collections, and reporting. Share an example of the firm's experience migrating clients from BAI or comparable legacy taxation systems without causing service downtime. How did the team approach and manage data conversion, staff training, and go-live cutover to maintain continuous operations?

TOPIC 7. Measurable Outcomes: Streamlined Tax Assessments & Improved Tax Collections

- The County needs strong evidence that a new taxation system will be worth the investment. Provide examples of projects with counties of a similar size and structure to Shenandoah County that have seen major improvements to their taxation operations. For example, what measurable improvements were seen in billing accuracy, delinquency rates, or staff productivity? Explain any reporting tools or dashboards that supported these gains, if applicable.

FINANCIAL ENTERPRISE RESOURCE PLANNING CATEGORY

TOPIC 8. Leveraging 'Bank of America Works' P-Card Integrations

- Describe how the proposed system integrates with P-card platforms. Please describe how past clients have used p-card integration to track spending by vendor, type of purchase, and user. If possible, provide details on how it integrates with Bank of America Works specifically. Detail at least one real-world example of automated journal entry imports, intuitive reporting, improved internal controls, and time saved through direct integration and reconciliation workflows.

TOPIC 9. Integration of Procurement, Contract Management, and Accounts Payable

- The County desires to use this project as an opportunity to implement a more formal and integrated approach to purchase requisitions, purchase orders, Requests for Proposals (RFPs), Invitations to Bid (ITBs), contract development and management, and p-card usage. The County desires for procurement and contracts to seamlessly integrate with the Accounts Payable function and to include best practices that feature electronic workflows, modern security and internal controls, and efficient processes. Provide an example of how you accomplished this project goal for another similarly situated client.

BUDGETING CATEGORY

TOPIC 10. Capital Project Management & Capital Fund Budgeting

- The County wants detailed CIP workflows that integrate with overall budgeting, so staff can plan and track capital spending on multi-year projects. Describe how the proposed budgeting solution addresses capital project workflows and fund management, including multi-year tracking of expenditures, integration with procurement, and real-time visibility into each project's budget status. Provide a real-world example in which the solution helped a client manage a complex CIP portfolio, noting tangible process improvements.

TOPIC 11. Budget Interactions with Purchasing, Procurement, Grants, HCM, and ELM Workflows

- Budgets should align smoothly across purchasing, project approvals, and staffing considerations. Explain how the proposed budgeting solution works seamlessly with related functions, such as purchasing, grants management, HCM (for staffing costs and a position budget), and ELM (for project or infrastructure planning). Reference a real-world success story that illustrates the benefits of tying budget data to any or all of these interconnected workflows.

TOPIC 12. Advanced Tools & Analytics for Long-Term Financial Planning

- The County needs robust forecasting tools for long-term financial planning and large-scale projects. How does the proposed budgeting solution support forecasting of multi-year infrastructure costs and resource demands (e.g., potential tax impacts, long-range debt, or projected population growth)? How does your solution create a program budget and consider multiple scenarios that impact service levels? Share at least one client example where analytics or scenario-planning tools make a tangible difference in long-term budgeting.

ENTERPRISE LAND MANAGEMENT CATEGORY

TOPIC 13. Streamlining Permitting and Empowering Staff for Strategic Roles

- The County's Community Development staff are highly skilled public sector professionals who currently spend a lot of their time handling manual, paper-based administrative tasks. Describe how the proposed ELM solution automates paper-intensive steps in permitting, contractor licensing, and inspections. Provide a real-world example of a jurisdiction where administrative staff gained the opportunity to take on more strategically important work

such as planning, data analysis, and community outreach thanks to automation of routine processes.

TOPIC 14. Using Data and Insights to Guide a 5-Year Comprehensive Plan

- The County wants to leverage permitting and land-use data for strategic growth planning and policy decisions. Explain how the proposed ELM solution can capture and analyze permitting/zoning data to inform long-range planning. Include a success story where a local government effectively used the system's analytics (e.g., GIS integration, permitting trends) to shape or adjust a multi-year comprehensive plan.

HUMAN CAPITAL MANAGEMENT CATEGORY

TOPIC 15. Position Control

- The County desires to define positions and job classifications that allow for the efficient administration of a personnel budget and position control, including maintaining historical information on positions as well as tracking the different funding sources of positions (e.g., grant-funded and state-supported positions). Explain how your solution has accomplished this project goal for another similarly situated client.

TOPIC 16. Complex Payroll for Special Hour Codes in Sheriff's Office | Fire & Rescue

- Several public safety departments track specialized overtime and leave types (e.g., multiple special codes). Explain how the proposed solution's payroll functionality accommodates special hour codes, varied overtime rules, and leave calculations for public safety employees. Share a client example that demonstrates automated tracking of unique pay codes, from time-entry through final paycheck disbursement, and describe the nature of any software integrations that supported this automation.

TOPIC 17. Benefits Administration Integrations – Real-World Examples and Outcomes

- The County needs to exchange information and connect seamlessly with external benefits providers for items like health insurance, the Virginia Retirement System (VRS), and workers' compensation. How will the proposed system integrate with third-party benefits providers to ease administrative burdens around enrollment, eligibility checks, and claims management? Share a real-world client success story, highlighting how quickly the integration was completed and what outcomes or efficiencies were realized (e.g., reduced error rates, quicker enrollment cycles, etc.).

TIME TRACKING CATEGORY

TOPIC 18. Transition from Paper/Excel to a Modern Timekeeping System

Most departments currently rely on handwritten or spreadsheet-based time tracking. The County wants to speed up time approval and payroll processing and reduce errors. Describe the best approach to onboarding organizations that previously relied on paper or Excel for time tracking. Share an example in which this approach guided users through system setup, data migration, and adoption strategies, highlighting how the implementation team overcame obstacles and challenges associated with a similar current state environment to the one at Shenandoah County.

7.10. Client References (Proposal Section 10)

Vendor shall provide five (5) references including the contact names, phone numbers, email addresses, mailing addresses, contract value, Enterprise Software Systems implemented, and a project summary from customers for whom the vendor is currently (or has previously) provided services as required in RFP 2025-002, within the last five (5) years. Of the five (5) client references, the vendor shall provide three (3) which are comparable municipalities and one (1) which is a comparable organization based in Virginia. As part of the project summary, vendors shall describe business processes that were improved, a description of challenges faced, lessons learned from the project, and a summary of the clients current situation.

References will be contacted to assist with the evaluation of experience, expertise, and customer satisfaction. Comparable client references should demonstrate a similar scale to Shenandoah County, in terms of population served, operating budget, number of employees, functional areas, etc. Each reference must be willing to make themselves available for a conference call and possible site visit. The template for completing vendor references is provided in ***Attachment 2 (Client References)*** of RFP 2025-002.

7.11. Exceptions and Deviations (Proposal Section 10)

The vendors shall provide a written description of any exceptions and deviations to the requirements of this RFP solicitation. This section will be all-inclusive and will contain a definition statement of every objection or deviation with adherence to specific sections within RFP 2025-002. Objections or deviations expressed only in other parts of the proposal, either directly or by implication, will not be accepted as deviations, and the vendors in submitting a proposal will accept this stipulation without recourse.

To avoid the scenario where the County is unable to negotiate successfully with its finalist vendor, any material exceptions to the RFP including those to the terms and conditions listed in Proposal

Section 10, will be clarified prior to elevation for software demonstrations. The County reserves the right to negotiate terms at any point and elevation for software demonstrations does not constitute acceptance of the vendors alternative terms.

7.12. Vendor Contract Samples (Proposal Section 11)

The vendors shall provide sample contract documents including but not limited to Software License, SaaS fees, 3rd Party Agreements, Maintenance, Services, Service Level Agreements, Remote Access, etc. The County requests that ***Proposal Section 11*** be delivered in digital format only. It should not be included in the paper copies of the proposals and will not count toward the page limit.

7.13. Required Forms and Attachments (Proposal Section 12)

Please provide all other required forms in this section:

- Signed Addenda
- Signed ***Section VIII – General Terms and Conditions***

The County requests that ***Proposal Section 12*** be delivered in digital format only. It should not be included in the paper copies of the proposals and will not count toward the page limit.

7.14. Functional System Requirements (Proposal Section 14)

The vendors are required to complete and submit a list of system requirements per proposed solution with their proposals. The list of system requirements for each Enterprise Software System is included in ***Attachment 1 (System Requirements)*** of RFP 2025-002.

Please note: The response to these requirements should be provided in the exact format as provided (e.g., no additional macros, formulas, extra columns, modifications, passwords, etc.). Failure to do so can result in disqualification of the entire proposal.

The County requests that ***Proposal Section 13*** be delivered in digital format only. It should not be included in the paper copies of the proposals and will not count toward the page limit.

Cost Proposal (Separate, Stand-Alone Document)

The vendors shall prepare a separate, stand-alone, Cost Proposal, which offers itemized pricing (through Go-Live, along with re-occurring annual costs), for all software, hardware, proposed services, and different maximum amount for travel expenses, including, but not limited to, the following costs:

- "Software as a Service" license with software assurance
- Additional software modules (by functional area)
- Implementation
- Annual support and SaaS Upgrades
- Software integration
- Hardware integration (as-needed)
- Data Conversion
- Training
- Travel Expenses

The contract shall be a firm, fixed-fee for the full scope of services defined in this RFP. Payments will be tied to the completion and formal acceptance of defined project milestones. The County requests that ***Proposal Section 14 (Cost Proposal)*** be delivered in digital and hard-copy format. As the Cost Proposal is a stand-alone document and not part of the narrative proposal, it will not count toward the page limit.

Proposers should include all software modules and state any limitations on module use. If no limitations are listed, the County will consider that pricing is based on full enterprise-wide access for the County.

III. PROPOSAL EVALUATION

1. Selection Committee

The role of the County's Selection Committee is to evaluate the proposals submitted, based upon the Proposal Evaluation Process, and make a recommendation of award(s).

2. Proposal Evaluation Process

The County's Proposal Evaluation Process will encompass the following:

- Round 1: Proposal Evaluation
- Round 2: System Demonstrations
- Round 3: Reference Checks
- Round 4: Site Visits (Optional)

Scoring will be completed covering all areas listed below. All scores for each vendor shall be added together to arrive at a final score for each proposal. Proposals will then be ranked in descending order by the total proposal score and compared with comparable proposals. The County reserves the right to not enter into any contract as a result of this RFP.

Round 1: Proposal Evaluation

The County's Selection Committee will conduct a detailed Proposal Evaluation of the vendors' proposals once the submission period closes to determine basic responsiveness to stated minimum requirements. The evaluation will determine whether they are complete, that the documents have been properly signed, and that they are generally in order. Proposals that are not deemed complete will be removed from consideration and will not be reviewed by the County's Selection Committee. During the Proposal Evaluation, each Selection Committee Member will score the vendor proposals using a proposal evaluation matrix form based on the Evaluation Criteria detailed below.

Proposal Evaluation Metric (Round 1)	Weight
Transmittal Letter (Section 1)	Pass / Fail
Vendor Qualifications (Section 3)	15%
Staffing Plan (Section 4)	10%
Client References (Section 9)	15%
Solution and Approach (Sections 5, 7, 8)	25%
Response to System Requirements (Section 6)	35%

Total Points	100%

Proposal Evaluation Metric (Round 1)	Weight
Total Project Cost (Section 10)	100%
Total Points	0 – 100%

All individual Selection Committee Member ratings are then added together to create a composite rating for each proposal. This composite rating indicates the group's collective ranking of each proposal. The highest-rated proposals will be shortlisted and will move on to Round 2: System Demonstrations.

Round 2: System Demonstrations

The County's Selection Committee will invite the Short-Listed vendors from the Proposal Evaluation (Round 1) to have their Project Teams conduct Oral Presentations of their Proposal Response and provide System Demonstrations. The County's Selection Committee will ask detailed questions encompassing all aspects of the vendor's Proposal Response, including the proposed solution(s), Project Team, Oral Presentation, and System Demonstration.

Please note that System Demonstrations for Short-Listed vendors are strongly preferred to be held on-site at Shenandoah County to allow for a more thorough evaluation and interaction. However, virtual System Demonstrations may be permitted as an alternative when on-site presentations are impractical due to unexpected events or prohibitive costs. Vendors who are unable to present on-site may still be considered, but an on-site demonstration will be favorably scored.

The Oral Presentations / System Demonstrations are estimated to be held during the weeks of June 16th, 2025 through July 12th 2025. Short-listed vendors should be prepared to conduct the System Demonstrations during this timeframe. The County's Selection Committee expects the vendor's proposed Project Manager and key members of the implementation team to be present at the on-site Oral Presentation / System Demonstration sessions. Please note, travel expenses associated with the System Demonstrations will NOT be reimbursed by the County.

During Round 2, the Selection Committee will score the System Demonstrations of the Short-Listed vendors (from Round 1) using an evaluation matrix form based on the Oral Presentation and

Demonstrations Criteria below. The Round 1 and Round 2 ratings will be considered in combination to determine the collective final ranking of the Short-Listed vendors.

System Demonstration Metric (Round 2)	Weight
Oral Presentation	20%
System Demonstration	50%
User Experience	30%
Total Points	100%

Round 3: Reference Calls

The County's Selection Committee will conduct Reference Calls. Vendors shall provide details of five (5) client references. These References should be customers with requirements similar to those of the County, including three (3) successful system implementations in localities that are comparable in size, scope, and operating budget to Shenandoah County's system implementation and one (1) successful implementation in a Virginia municipality. The County reserves the right to contact these reference customers and to discuss their satisfaction with the vendor, its products, and its proposed solution(s) in response to RFP 2025-002.

References Call Metric (Round 3)	Weight
Reference Calls	100%
Total Points	0 – 100%

Round 4: Site Visits (Optional)

The County's Selection Committee will conduct optional Site Visits following the completion of Round 3's Reference Calls. The optional Site Visits will allow the County to meet in-person with the vendor's References. The County's Selection Committee will have the ability to see a demonstration of the vendor's proposed solution in production and ask questions related to the implementation and on-going relationship with the vendor finalist.

Site Visit Metric (Round 4) – Optional	Weight
Site Visit	100%
Total Points	0 – 100%

After Round 3 (and optional Round 4), the County's Selection Committee will finalize the composite score across all rounds of evaluation. Shenandoah County may commence negotiations with the highest-ranked eligible vendors or may commence simultaneous negotiations with all qualified vendors.

IV. CURRENT-STATE ENVIRONMENT (AS-IS)

Shenandoah County, VA

1. Objective

The purpose of ***Section V – Current-State Environment*** is to provide an overview of Shenandoah County's Current Environment. This section summarizes the existing enterprise systems each Functional Area is using in the current state. Current-State Environment (As-Is) summaries are also provided for the following County functional areas, which will be impacted by the prospective suite of integrated Enterprise Software Systems:

- Commissioner of the Revenue
- Community Development
- Finance
- Human Resources
- Landfill & Recycling
- Parks & Recreation
- Treasurer
- Water & Sewer

It is important to note that Shenandoah County expects all vendors to read all information thoroughly within this RFP to ensure proposed solutions will align with the County's vision, as well as business requirements. Failure to carefully read and understand the **Current Environment** may cause the proposal to be out of compliance and be rejected by the County.

2. Current-State Environment (As-Is)

2.1 Systems and Technical Environment

Table 4.2.1 - Technical Environment identifies current technology standards at Shenandoah County.

Table 4.2.1 – Technical Environment

TECHNOLOGY	STANDARD
Database	SQL for some systems
Server OS	Windows 2016 and above
Desktop OS	Windows 10/11 – Moving all to 11
Server Hardware	Mainly Dell, some HP

TECHNOLOGY	STANDARD
Desktop Hardware	Mainly Dell, some Lenovo
Laptop/Mobile Hardware	Mainly Dell, some Lenovo
Tablet/Field Hardware	Android tablets (for Neptune360)
LAN/WAN	Dell Switches, some Aruba Sonicwall Firewalls
Office Productivity	Office365
Browser	Brave, Chrome, Edge, Firefox
Email Server/Client	O365/Outlook
Virtual Environment	VMWare Esxi
HelpDesk Ticketing System	Solarwinds Service Desk
Image/Application Deployment System	PDQ Deploy GPO

Table 4.2.2 – Business Systems provides an overview of the County's current business applications. While not all applications listed will require direct integration with the proposed Enterprise Software Systems, vendors must demonstrate their ability to integrate seamlessly with relevant systems or propose viable, value-driven alternatives. This includes ensuring compatibility with the County's existing technology infrastructure and addressing how the proposed solution will maintain operational continuity during and after implementation. Detailed integration plans should be included as specified in ***Section II (7 – Submittal Requirements)*** of this RFP.

Table 4.2.2 – Business Systems

SYSTEMS/APPLICATIONS	FUNCTIONS
BAI Municipal Software (on-premise; version V7R4M0 installed in July 2020)	• BAI.NET • Finance Modules: ○ Financial Reporting (General Ledger) ○ Purchasing ○ Accounts Payable ○ Payroll • Commissioner / Assessments Module • Treasurer / Counter System Module • Building Inspection Module
Vision Government Solutions (VGSI) CAMA	Property tax assessments
Laserfiche	Electronic Document Management – COR
WasteWorks (on-premise)	Landfill – upgrading soon

SYSTEMS/APPLICATIONS	FUNCTIONS
FuelMaster (on-premise)	Landfill – upgrading soon
QuickBooks	Tracking financial actuals for some departments
Esri ArcGIS Online	Mapping and zoning
Neptune360	Meter Reading
MainStreet	Utility billing
RemitPlus Express	Lockbox processing for tax payments
FileScope	Valuation for certain vehicles (boats, trailers)
Avenity (JD Power)	Valuation for vehicles under 20 years old
iSeries	Data transfer between Vision and BAI
Power DMS / Power Time	Scheduling and timekeeping for Sheriff's Office
Vector Scheduling	Scheduling and timekeeping for Fire & Rescue
Southern Software	Law enforcement records and some tax billing
Genetec	Access badge management
Solarwinds Service Desk	IT ticketing system
BMS (BillMail Solutions)	Printing and mailing for billing and notices
PayPal	Online Tax Payment Collection (through BAI.net)
Bank of America Works	Purchase card management
VACORP	Workers' compensation claims
Anthem	Health insurance benefit management
DebtBook	Debt, Leases, and SBITA
GovOS	Short term rental permit issuance and calculating and collecting online transient occupancy tax payments
Instrulogic	SCADA (water – Stoney Creek Sanitary District)
Envirence	SCADA (water & sewer TBM Sanitary District)
Raptor Acceptance Control System (RACS)	Security access station that integrates with a Raptor Septage Acceptance Plant to track septage deposits
CivicPlus CivicRec	Activity, facility, staffing, and point-of-sale system in use by Parks & Recreation

2.2. Functional Areas

This sub-section provides a summary of the current state of operations in the following Functional Areas within the County's organizational infrastructure.

Finance Department

Primary Business Technologies: BAI Municipal Software (BAI), DebtBook, Excel, BillMail Solutions (BMS), Bank of America Works

The Finance Department is responsible for providing financial services to the County. The Finance Department and the Treasurer's Office will primarily use the Financial ERP System as part of the scope of services defined in RFP 2025-002.

a) General Ledger

- General Ledger (GL) performs accounting functions for the County, recording all financial transactions to appropriate accounts.
- GL is also responsible for trial balance management, interim financial reporting, financial statement reporting (ACFR), cost allocation plan, and debt management.
- GL uses a defined account structure for Fund & Encumbrance Accounting for Assets, Liabilities, Revenues, Expenditures (Expenses), and Equity accounts.
- All Departments' transactions, regardless of software, are recorded in the Financial System General Ledger.

b) Purchasing | Procurement

- Departments identify procurement needs, gather vendor quotes, and submit Purchase Order (PO) requests for approvals based on thresholds (e.g., purchases over $5,000 require a PO and two quotes). Departments will also work with County Administration and/or Finance for more formal procurements, like a Request for Proposal (RFP) or Invitation to Bid (ITB), for purchases exceeding certain procurement thresholds. Finance reviews PO requests, checks budget availability, and generates the official PO. Departments and Finance share the responsibility of tracking open purchase orders.
- Departments receive invoices and associate them with POs. Invoices are coded, signed by department heads, and sent to Finance for payment processing.
- Contract approval thresholds vary by contract type and content, with some contracts requiring County Administrator or Board review. Once signed, contracts are monitored by the requesting department. Contract renewals require departments to update budgets and ensure Certificates of Insurance are uploaded.
- At year-end, the Finance Department facilitates departmental review of all open purchase orders to confirm whether items or services have been received and invoices processed. Outstanding POs may be encumbered to carry forward into the next fiscal year, while completed or unnecessary POs are closed.

c) Accounts Payable

- Each department within the county is responsible for initiating its own purchase requests, processing invoices, and ensuring proper documentation for any goods or services they acquire before payment requests are forwarded to the Finance Department.

- Departments often verify goods received, approve invoices related to their budgets, and ensure compliance with county procurement policies, including the proper use of P-cards by department employees.
- The Finance Department centralizes the final AP processing, where they review departmental requests for accuracy and compliance, manage the AP records, and handle accounting functions.
- After AP processing in Finance, the Treasurer's Office finalizes the disbursement of funds to ensure only authorized payments are executed.
- Departments reconcile their own AP transactions, and General Ledger reconciles funds disbursed by the Treasurer's Office.
- Finance manages the distribution and payoff of P-cards, processes tax forms, and handles unclaimed property.

d) Accounts Receivable

- Departments are responsible for identifying receivables and issuing invoices for services provided. Invoices are tracked internally within departments.
- Invoices and check stubs are coded and stored by Administration/Finance. These are later recorded in the financial system by the Treasurer, who completes the process by depositing funds into the proper account and notifying the relevant department.
- Checks and transmittal forms are submitted to the Treasurer for processing and deposit in most cases. Some payments, particularly recurring payments, are reported to Finance to be recorded directly in the General Ledger with no associated invoice.

e) Budget

- The Finance Department coordinates with departments and with the Board of Supervisors to manage the County's annual operational budget.
- The County budgets for capital projects over multiple years in collaboration with Community Development and other departments responsible for county facilities and infrastructure.
- Finance manages Budget amendments and adjustments throughout the fiscal year to allocate unexpected revenue or meet urgent needs. Some larger adjustments require approval by the Board of Supervisors.
- Departments and partner agencies, like Social Services and Schools, submit Source of Revenue forms detailing where their received funds originated. This process, along with property valuation data from the Commissioner of the Revenue, informs the revenue forecasting process. Currently, the Finance department uses a straight-line projection model for revenue forecasting.

f) Fixed Assets

- Each department identifies fixed assets for purchase during budget planning and provides information about purchased assets to the Finance Department for tracking purposes.
- The Executive Assistant manages the insurance coverage of newly purchased assets by entering asset data into the VACORP system.
- The County's assets are verified against insurance records annually.
- At the end of the fiscal year, assets are reclassified from expenses, and depreciation is applied to existing assets.

g) Grants Management

- County Administration approves grant proposals before submission and works with Finance to review the requirements to ensure compliance. Some grants require Board approval if they impact future fiscal years' budgets.
- The Treasurer's Office records incoming grant awards, coordinates with departments on account codes, and manages receipt documentation. For pass-through grants, the Treasurer verifies compliance and disburses funds to sub-recipients as required.
- Departments track grant-related spending and run necessary reports. Finance and Administration certify report accuracy, especially for personnel or procurement expenses or reimbursement-based grants.

Commissioner of Revenue

Primary Business Technologies: BAI, Vision Government Solutions (VGSI) CAMA, Laserfiche, iSeries middleware, FileScope, BMS, Avenity (JD Power), Esri ArcGIS Online

The Commissioner of Revenue manages the assessment of real property, business property, and personal property for Shenandoah County, providing valuations for tax purposes. This Functional Area will primarily utilize the integrated Taxation System and integrated Enterprise Land Management System as part of the scope of services defined in RFP 2025-002.

a) Real Property Assessment

- The Commissioner of the Revenue's office manually retrieves deeds and wills from the Clerk's Office weekly.
- Ownership, addresses, and parcel details are manually updated based on deeds of transfer and recorded surveys or plats.
- New parcels, consolidated parcels, and subdivisions are valued individually by the Real Estate Clerk.
- Tax relief applications are sent annually to eligible recipients, and eligibility is determined manually, with updates entered into spreadsheets.

- Approximately 4,300 parcels in the Land Use Program are processed annually using data extracted from Vision, with tracking maintained in spreadsheets.
- Vision serves as the primary property valuation system, and data is exported semiannually into BAI using middleware (iSeries). Certain fields, such as tax relief amounts for veterans and the elderly, are manually updated.
- Property Tax Books are created twice a year, with separate books for towns, districts, and tax-exempt properties. Batches are generated and sent to towns' software or the Treasurer for processing.
- Abatements, rollbacks, and supplements require manual calculations and system updates by the Master Deputy.

b) Personal or Business Property Assessment

- DMV data is downloaded weekly but requires manual corrections to link vehicle data to existing accounts. Approximately 300 vehicle records are processed weekly, with corrections applied manually.
- Older vehicles and specialty assets, such as boats, trailers, RVs, and cars over 20 years old, are valued manually using FileScope.
- Valuation data for newer vehicles is processed through Avenity and JD Power.
- Business property depreciation is calculated annually for approximately 4,000 Form 762 submissions, using Excel spreadsheets for depreciation schedules.
- Tax liabilities are calculated by applying rates to categorized property types, with separate tax batches created for towns and the county.

Treasurer's Office

Primary Business Technologies: BAI, RemitPlus Express, First Data, PayPal Business, BMS

The Treasurer's Office manages the County's Tax Billing, Delinquent Tax Collections, and Tax Payment Collection functions, and supports the County's financial operations, including Receipts and Disbursements. This Functional Area will primarily utilize the integrated Taxation System and the ERP System as part of the scope of services defined in RFP 2025-002.

a) Tax Billing

- Tax billing is initiated after property valuations are provided by the Commissioner of the Revenue and entered into the BAI system.
- Custom spool files are created for specific criteria, including delinquencies, fees, and adjustments (e.g., DMV fees, PPTRA).
- Tax bills are printed and mailed by BMS, a third-party vendor, or managed in-house by the Treasurer for supplemental bills.

b) Tax Payment Collection

- Payments are collected via three primary methods: over-the-counter, lockbox (managed via RemitPlus Express), and online (BAI.net).
- Online payments are processed through PayPal, while checks are scanned and encoded using a check scanner linked to First Bank's system.
- Counter payments are manually entered into BAI, stamped, and reconciled daily.

c) Delinquent Tax Collections

- Delinquency reports are generated monthly or as needed, segmented by tax type.
- Notices are mailed to delinquent accounts using BMS, and late fees are applied automatically in BAI.
- Collection efforts vary by tax type and may include DMV stops for personal property or legal actions for real estate taxes.

d) Receipts

- Departments submit transmittal forms for received payments. Each form uses an interface code linked to specific accounting templates in BAI.
- Direct deposits are reconciled with department notifications and associated with interface codes.
- Grant receipts and other external payments are logged, scanned, and saved in the network drive for recordkeeping.

e) Disbursements

- Disbursement requests are submitted to Finance for approval before being sent to the Treasurer.
- Payments for Social Services and Schools are managed separately, while County disbursements use the BAI system.
- The Treasurer verifies fund availability and processes payments, either by releasing checks or posting funds electronically.

Community Development

Primary Business Technologies: BAI, ArcGIS, Excel, GovOS

Community Development manages comprehensive planning to meet the preservation and growth needs of Shenandoah County and will primarily utilize the Enterprise Land Management (ELM) system as part of the scope of services defined in RFP 2025-002.

a) County Contractor Licensing

- Contractors must visit the Community Development office in person to apply for or renew licenses.

- Applications are processed manually by Permit Technicians, who verify credentials through the DPOR website and enter data into BAI.
- Payments are tracked using Excel-based transmittal forms, which are then delivered to the Treasurer's Office.
- Licenses are issued manually, with contractor data recorded in spreadsheets for tracking and renewal reminders.

b) Permit Application and Enforcement

- Permit applications are submitted on paper forms and entered into BAI by Permit Technicians.
- Plans review involves multiple steps, including external agency approvals (e.g., VDOT, VDH), which are tracked manually using spreadsheets and paper checklists.
- Zoning and erosion/sediment components are processed separately, requiring redundant data entry and physical documentation.
- Permit approvals and denials are communicated manually via phone calls and paper notifications.

c) Inspections

- Inspection scheduling relies on printed schedules and manual updates in BAI.
- Inspectors record results on paper and enter reports into BAI after inspections are completed.
- Certificates of Occupancy are issued following manual reviews and approval processes, with data recorded in a physical ledger book.

d) Financial Management

- Permit fees and inspection charges are tracked manually in Excel and reconciled with the Treasurer's Office.
- Interdepartmental charges for shared services require journal entries and manual adjustments.
- Budget tracking and reporting rely on spreadsheets, which are updated manually.

e) Human Resources

- Time and attendance are tracked manually using Excel templates.
- Training and certification records for inspectors and planners are stored locally.

Landfill & Recycling

Primary Business Technologies: WasteWorks, QuickBooks, Excel, FuelMaster

Landfill & Recycling operates a landfill, a recycling center and twelve citizen convenience sites distributed throughout the county, responsible for Material Tracking and Billing. This department will be impacted by the implementation and integration of the new primary system(s).

a) Financial Management

- WasteWorks is used to track customer balances and generate billing statements, but many accounts remain inactive, requiring manual adjustments for delinquencies.
- AP invoices are manually coded and approved before submission to Finance.
- Reconciliation processes for revenue involve duplicative steps across Solid Waste, the Treasurer's Office, and Finance.

b) Human Resources

- Employees use physical punch clocks to track hours, with data manually transcribed into spreadsheets for payroll processing.
- CDL license tracking and compliance rely on spreadsheets, with no automated alerts for expirations.
- Employee access to benefits and training resources is limited due to the lack of self-service tools or portals.

Water & Sewer

Primary Business Technologies: Neptune360, Raptor Acceptance Control System (RACS), MainStreet, QuickBooks, Excel, Instrulogic, Envirence

Water & Sewer operates the Stoney Creek Sanitary District, the Toms Brook-Maurertown Sanitary District, and the North Fork Regional Wastewater Treatment Plant, performing duties that include Utility Meter Reading, Utility Billing, and Customer Service. This Functional Area will primarily utilize the Utility Billing system as part of the scope of services defined in RFP 2025-002.

a) Utility Meter Reading and Billing

- Meter readings are collected monthly or bimonthly using Neptune360 mobile devices and must be manually imported into MainStreet for billing.
- Flat-rate customers are billed using fabricated meter readings due to system limitations.
- Processes vary between the districts, which are reflected in slightly different MainStreet software setups for each district.
- Billing and service inquiries are documented by Utility Clerks, with escalations handled manually.
- Service-related issues require fax communications between Utility Clerks and the Construction Supervisor, slowing resolution times.
- New connections require application forms and payment submission to the Treasurer. Accounts are created in MainStreet, and ACH setup is done manually when applicable.
- Service transfers involve manual meter readings and faxed forms, with new accounts established in MainStreet.

b) Water Leaks

- Leaks are detected either by continuous meter usage in MainStreet or through customer reports.
- Remediation involves manual notifications, and service disruptions are communicated via door hangers, phone calls, and social media.

c) Financial Management

- Bill payments are tracked using daily transmittals to the Treasurer for reconciliation.
- AP invoices are manually coded and approved before submission to Finance, and interdepartmental services require manual journal entries.

d) Human Resources

- Timekeeping is done on paper forms, with supervisors manually calculating leave balances in Excel.
- Overtime and shift adjustments are tracked manually, causing delays in payroll processing.
- Training and certification records are stored locally, and onboarding procedures vary across districts, leading to inconsistencies in documentation.

Human Resources Department

Primary Business Technologies: BAI, VACORP, Anthem

Human Resources manages the County's employment lifecycle, including recruitment, onboarding, benefits administration, and compliance, and will primarily utilize the integrated Human Capital Management (HCM) system as part of the scope of services defined in RFP 2025-002.

a) Personnel Management

- Departments notify HR of open positions by submitting a position requisition form, which must include the job description, budget approval, and expected timeline for filling the role.
- HR tracks open positions manually in department-specific spreadsheets. The vacancy status is reviewed periodically to update departmental staffing levels and plan for any potential reallocations or temporary assignments as needed
- The County HR department posts job vacancies on the County website, social media, and local job boards. Applications are screened, interviews are conducted, and background checks are processed before extending formal offers.
- Human Resources manages position and pay changes through Payroll Change Notices (PCNs), using department-specific spreadsheets to calculate and validate salary updates. The BAI system handles position tracking but lacks historical data capabilities.

- All separation documents are completed by the departing employee and department head, with records maintained in personnel files. HR ensures that final pay and benefits are settled according to County policy, coordinating with Finance to issue any outstanding payments and confirming final benefit contributions.

b) Benefits Administration

- HR manages new employee benefit enrollment, qualifying life events, and open enrollment updates manually in spreadsheets, entering benefits deductions into the payroll system.
- To meet ACA requirements, HR prepares and files necessary forms, such as 1095-Cs, using manually tracked data. This process includes verifying benefits eligibility and ensuring deductions align with coverage levels.
- HR communicates directly with benefits vendors for enrollment updates, coverage changes, and claims management, ensuring records align across systems and maintaining updated information for VACORP and Anthem.

c) Performance Management

- HR facilitates standardized annual performance reviews, providing evaluation forms and deadlines to department heads. Completed evaluations are reviewed by HR for consistency and stored in personnel files.
- If performance issues are identified, HR works with department heads to create PIPs, documenting specific goals, actions, and timelines for improvement. HR monitors progress and keeps detailed records of performance discussions and outcomes.
- HR tracks performance ratings to support decisions on merit-based raises or bonuses, coordinating with Finance to implement pay changes based on evaluation results.

d) Professional Development

- Each department proposes a budget for professional development, and HR manages conditional or optional training needs. Certifications and training impact pay through updates to the BAI system and are documented in personnel files.
- HR maintains records of completed training and certifications, documenting each in personnel files and updating pay rates when certifications impact employee compensation.
- HR coordinates onboarding training for new employees, covering county policies, procedures, and compliance requirements. For mandatory training sessions (e.g., safety training), HR tracks attendance and certification to ensure compliance.
- The County extends some conditional offers, based on employees completing certain certifications within an agreed-upon timeframe, which need to be tracked and acted upon appropriately. Conditions of the offer can result in pay changes or involuntary separation.

e) Risk Management

- Policies are reviewed annually, and employees sign off on essential policies each December. HR manages compliance through paper signatures and manual tracking, with an annual audit of personnel files.
- Work-related incidents are reported to a third-party nurse service, and HR coordinates medical follow-up, tracks lost time, and manages claims in collaboration with VACORP. An annual audit is conducted to verify workers' compensation claims.

f) Time and Attendance

- Time and attendance are tracked using a mix of Excel templates tailored to employee types (e.g., full-time, part-time, specific departments like Fire & Rescue). Most departments print these forms, fill them out by hand, and then manually enter data into spreadsheets.
- Each department manages time-tracking independently, and some departments need to track special codes or fields on employee time and attendance records. For instance, Fire & Rescue employees track department-specific overtime codes using a dedicated "Overtime Accountability Record," and Parks & Rec part-time staff use handwritten timesheets specific to different work zones.
- Departmental supervisors review, sign, and approve timesheets before sending them via interoffice mail to the Finance Specialist for payroll processing.

g) Payroll

- Full-time employees use an exception-based tracking system, where only deviations from scheduled hours are entered. Part-time employees submit timesheets with total hours worked per pay period.
- Department heads submit payroll change requests to HR for any payroll changes, including adjustments for pay rate, tax, benefits, leave without pay, and departmental transfers. HR implements these changes within the payroll system.
- Payroll entries are handled manually for specific employee groups, such as election workers who are paid a daily rate. Other manual process in the current state include bonuses and the tracking of some deductions and adjustments.
- The Director of Finance reviews payroll before processing. Once payroll has been processed and approved by Finance, the Treasurer's Office handles the final authorization and the actual disbursement of funds to employees. This includes releasing direct deposits and processing a small number of paper checks.

Public Safety

Primary Business Technologies: Vector Scheduling, PowerDMS (PowerTime), QuickBooks, Excel

Public Safety ensures the protection of all County residents and visitors through the Shenandoah County Department of Fire & Rescue, Shenandoah County Sheriff's Office (SCSO), and the Emergency Communications Center (ECC). This department will be impacted by the implementation and integration of the new primary system(s).

a) Financial Management

- Miscellaneous revenues, such as EMS billing, are tracked independently and manually reconciled with the Treasurer's system.
- Event-specific revenues (e.g., training fees, court duty reimbursements) are inconsistently documented across departments.
- Invoices are tracked and approved using spreadsheets, with manual journal entries required for split budgets.
- P-Card transactions and grant-funded purchases lack centralized tracking, complicating reconciliation.

b) Human Resources

- Performance evaluations and disciplinary processes are tracked independently by departments, often using spreadsheets and physical files.
- Training certifications and compliance data are not centralized, requiring significant administrative effort to produce reports for audits.

c) Time and Attendance

- Fire & Rescue uses Vector Scheduling for shift patterns and overtime approvals but reverts to paper and Excel for payroll submissions.
- ECC and the Sheriff's Office rely on paper-based workflows for scheduling and timekeeping, leading to inefficiencies in tracking specific hour codes (e.g., court duty, special events).

Parks & Recreation

Primary Business Technologies: CivicRec, Excel

Parks & Recreation enhances the quality of life for the Shenandoah County community by providing recreational programs, facilities, and opportunities. This department will be impacted by the implementation and integration of the new primary system(s).

a) Financial Management

- CivicRec is used to manage membership fees and program revenues, but reconciliation with the Treasurer's system is manual and time-intensive.

- Seasonal program revenues are submitted to the Treasurer's Office via transmittal forms, leading to delays in revenue reporting.
- Purchases and AP invoices are tracked using paper receipts and handwritten logs, increasing inconsistencies in budget tracking.
- Budget data is maintained in spreadsheets, with limited automation to prevent errors or overspending.

b) Human Resources

- Timekeeping relies on handwritten timesheets for part-time employees and Excel templates for full-time staff, with no centralized system for tracking hours.
- Employees working across zones submit separate timesheets for each location, complicating reconciliation and payroll processing.
- Seasonal hiring and onboarding processes are manually managed, creating administrative burdens for processing policy acknowledgments and documentation.
- Personnel files for inactive employees (e.g., seasonal staff) are inconsistently managed, hindering compliance tracking.

V. OPTIMIZED FUTURE-STATE (TO-BE)

Shenandoah County, VA

1. Optimized Future State (by Enterprise Software System)

The purpose of ***Section V – Optimized Future State*** is to detail the County's future vision for utilization of the various modules which comprise the integrated suite of enterprise solutions requested in RFP 2025-002.

There are two (2) primary systems and up to five (5) ancillary systems that comprise the suite of integrated enterprise solutions being requested as part of Shenandoah County RFP 2025-002. A detailed list of the desired functions for each system can be found in ***Section I – General RFP Information***. The requested solutions that are included in the Scope of Work are as follows:

- **Primary Systems**
  - Financial ERP System
  - Human Capital Management System
- **Ancillary Systems**
  - Budgeting System
  - Time and Attendance System
  - Utility Billing System
  - Taxation System
  - Enterprise Land Management System

Shenandoah County anticipates a carefully managed implementation of the integrated enterprise software suite to ensure business continuity and minimize disruption to County operations. The specific timeline, sequencing, and phasing of system deployments will be determined in collaboration with the selected vendor(s) based on the proposed solutions and County priorities. Foundational systems, such as Financial ERP and HCM, may be prioritized initially, followed by ancillary systems over the next three to five years. Vendors are expected to propose a comprehensive implementation plan that demonstrates their ability to maintain continuity, support seamless transitions, and meet the County's operational needs throughout the process.

Optimized Future-State ("To-Be") workflows for key business processes across all functional areas were developed using the Business Process Mapping and Notation (BPMN) 2.0 format. Please use the Dropbox link found in each subsection to download a zip file containing the "To-Be" workflows for the functional areas impacted by the Enterprise Software System of interest.

The County has worked to define improved processes, and it expects that the finalist vendor will leverage work already completed and not require significant time spent on understanding current process and working through gap analysis. The expected future-state (to-be) process flows for many key processes are included herein. The County expects that vendors will leverage this documentation in project deliverables and make recommendations on how to best leverage the software to meet these processes OR improve upon processes with features of the software

Detailed Requirements Traceability Matrices (RTM) are provided in Microsoft Excel format for each requested Enterprise Software System in ***Attachment 1 (System Requirements)***. Vendors must complete and submit the RTMs relevant to their proposed solutions in the original Excel format as part of their Proposal. Each RTM allows the County to evaluate how the proposed solutions align with the specific functional and technical requirements outlined in this RFP.

2. Primary Systems (ERP System and HCM System)

The County's modernization efforts center around two primary systems: the Enterprise Resource Planning (ERP) System and the Human Capital Management (HCM) System. These systems are foundational to County operations, supporting financial management, human resources, and related functions. Together, they form the core of the integrated enterprise suite and are expected to streamline workflows, enhance data accessibility, and ensure seamless interoperability with other ancillary systems.

Enterprise Resource Planning (ERP) System

The County envisions implementing an ERP System that will provide central oversight and visibility into the County's financial operations. By integrating these functions within a unified platform, the ERP System will eliminate inefficiencies, improve data accuracy, and enable more informed decision-making. It must also ensure seamless integration with the HCM System and other critical systems to support comprehensive County operations.

Vendors should use the Dropbox link found below to download a folder containing the optimized Future-State "To-Be" workflows related to the ***ERP System***:

Shenandoah County - Future State BPMN - Finance

a) General Ledger

- The integrated ERP system will eliminate manual reconciliations by implementing digital approval workflows and automating data entry. With seamless integration between the Chart of Accounts, journal entries, and bank reconciliations, departments will experience

faster, more accurate month-end and year-end closures, reducing close times and minimizing errors.

- The integrated ERP system will leverage reporting tools that provide current, accurate, and relevant data to County departments and offices.
- Consolidated reporting and flexible financial management features will streamline operations, support complex financial structures, and prepare the County's finance system for future growth and evolving needs.

b) Purchasing | Procurement

- The ERP system will provide tools for digital procurement and contract management workflows, which will standardize routing and approvals based on purchasing thresholds, ensuring timely execution, improved visibility, and reduced errors in purchasing processes.
- A digital purchase requisition and purchase order system will eliminate paper-based processes, improving accuracy and enhancing budget tracking through encumbrances. Departments will gain better insights into spending, helping them manage budgets effectively and prevent overspending.

c) Accounts Payable

- The integrated ERP system will bring vendor management, invoice processing, and payments into a single, unified system, reducing bottlenecks and improving accuracy through real-time tracking and automated invoice entry. Standardized approval workflows will ensure compliance and provide clear audit trails.
- Automating Purchase Card Program reconciliation will enhance control and simplify monitoring, ensuring compliance with spending policies while reducing the time required for manual oversight.

d) Accounts Receivable

- The ERP system will centralize Accounts Receivable data, automating entries and reconciliations to streamline revenue recognition and improve data consistency across departments with standardized workflows and real-time reporting.

e) Budgeting

- The ERP system (or an integrated, best-of-breed Budgeting System) will create a single source of truth for operating (including personnel) and capital budget requests, amendments, monitoring, and revenue forecasts, enhancing accuracy and improving collaboration. Real-time data access will enable departments to make better-informed budget decisions and support consistent, reliable projections.
- The ERP system (or an integrated, best-of-breed Budgeting System) will provide forecasting, analytics, and scenario planning tools to help drive decisions surrounding the allocation of resources and will allow for improved long-term forecasting that projects

and analyzes expense and revenue trends, expected capital expenditures, multi-year capital needs, and other cost and revenue drivers.

- An integrated capital planning module will allow automated prioritization of multi-year projects and ensure that funding aligns with long-term goals, simplifying the management of projects and fund allocation.

f) Fixed Assets

- The ERP system will enable efficient data entry and digital asset tracking to replace physical forms, increasing accuracy and streamlining asset management. Real-time integration with Finance and insurance records will simplify reconciliation, ensuring consistency and timely updates.
- A centralized workflow for tracking additions, disposals and transfers will improve compliance and give departments greater visibility into asset status, history, and valuation.
- A more robust tracking of the County's fleet, including the ability to schedule regular preventative maintenance and track the overall total cost of maintaining vehicles, would improve operations.

g) Project and Grants Management

- The ERP system will provide centralized project and grant tracking, enabling Finance to standardize workflows, improve compliance, and ensure accurate reporting. Automated updates will support alignment between project budgets and goals, helping prevent funding gaps and project delays.
- The ability to track internal costs and contracted costs, and roll those into a capital project, would improve the County's ability to manage large scale projects.
- Proactive management tools within the ERP will enhance oversight of grant funds, allowing the County to make timely adjustments and maintain compliance with grant requirements.

Human Capital Management (HCM) System

The County envisions implementing an integrated HCM solution to centralize HR processes such as recruiting, hiring, onboarding, performance management, and professional development across all Shenandoah County departments. It should provide self-service access to employees to manage their benefits, view payroll information, and access online policy trainings. The HCM solution should include functionality to accurately track and account for all employee time and attendance data, including the ability to import time and attendance data from departmental systems if needed.

Vendors should use the Dropbox link found below to download a folder containing the optimized Future-State "To-Be" workflows related to the ***HCM System***:

Shenandoah County - Future State BPMN - Human Resources

a) Personnel Management

- The integrated HCM system will streamline the recruiting and onboarding process by providing a centralized platform for tracking applications, managing candidate status, and storing onboarding documentation. This will reduce delays, improve communication with candidates and new hires, and ensure that onboarding tasks are completed efficiently.
- Automated workflows will reduce manual handoffs across departments, ensuring that critical employee information is updated in real time and accessible to HR and Payroll (e.g., electronic employee file and personnel actions). This consistency will improve data accuracy and eliminate redundant processes, allowing departments to focus on strategic initiatives rather than manual data entry.
- The system will automate offboarding workflows, ensuring timely deactivation of access and safeguarding sensitive data. By standardizing the offboarding process, Shenandoah County will improve data integrity, reduce security risks, and maintain a clear record of employee status across departments.
- The integrated HCM system will allow departments to generate real-time, customizable reports on metrics such as workforce demographics, benefits utilization, training completion, and performance trends. Automated reporting features will enable HR to easily track compliance, monitor key performance indicators, and support data-driven decision-making. With consolidated data from multiple departments in one place, the County can generate insights that align with strategic goals, improve workforce planning, and streamline reporting for audits and regulatory requirements.

b) Benefits Administration

- The integrated HCM system will streamline benefits administration, consolidating all benefits data within a single system that integrates with providers and tracks enrollment changes, life events, and claims. This centralized approach will eliminate the need for spreadsheets and manual tracking, significantly reducing errors and ensuring accurate, up-to-date information for compliance audits.
- With an employee self-service portal, employees can manage benefits enrollments and access resources directly, improving communication and reducing delays.

c) Performance Management

- The integrated HCM system will provide a streamlined, standardized platform for conducting performance reviews and tracking achievements across departments to ensure that all departments follow uniform evaluation standards. Notifications and centralized reporting tools will reduce delays in this review process.

- Centralized tracking of disciplinary actions will give HR and department heads better visibility into employee issues, enabling timely resolution and improving documentation accuracy. With tools to monitor employee achievements and address performance concerns consistently, the system will support a unified, data-driven view of employee performance.

d) Professional Development

- The integrated HCM system will support Shenandoah County's professional development goals by enabling a unified view of training records, certifications, and development initiatives. Automated workflows will track training approvals and attendance as well as provide automatic notifications for recertifications, reducing administrative delays and providing HR with a strategic view of workforce development.
- The HCM system will support proactive development planning and ensure compliance with training requirements, making it easier for departments to align professional growth initiatives with the County's long-term goals. Employees will benefit from a clear pathway for development, creating a structured approach to skill-building and career progression.

e) Risk Management

- The integrated HCM system's policy management module will provide a centralized repository for organizational policies, enabling HR to efficiently track, update, and enforce compliance. Automated tracking and acknowledgment features will streamline the policy review process, ensuring that all employees have timely access to policy updates and providing HR with visibility into compliance status.
- For workers' compensation, the system will track incidents, claims, and follow-up activities, facilitating seamless communication with external vendors and enabling accurate, compliant claims management. This centralization will enhance HR's ability to manage risk, maintain up-to-date records, and ensure prompt response to incidents.

f) Time and Attendance

- The integrated HCM system's automated time and attendance system (or an integrated, best-of-breed Time and Attendance system) will enable the County to capture time and attendance data across all departments without the use of spreadsheets. Employees will use standardized digital tools to record hours and leave, replacing paper forms and manual entries. This centralized approach will improve data accuracy, streamline tracking, and reduce administrative workloads.
- The system will support automated overtime calculations and integrate directly with payroll, eliminating the need for separate spreadsheets and reducing processing time.
- For departments with unique scheduling needs (e.g., Fire & Rescue and Sheriff's Office), the HCM system will allow data imports from existing scheduling software, recording the special codes and fields in use by these departments.

g) Payroll

- The ERP system will integrate with the future HCM solution, feeding time and attendance data and benefit plan data directly into the payroll system automatically, reducing manual data entry and minimizing errors. Automated adjustments and special payment features will provide greater transparency and accuracy.
- A unified payroll and benefits module will streamline reporting, enhance compliance, and align payroll data with benefits management, reducing administrative work and improving data integrity.

3. Ancillary Systems

In addition to the primary systems, the County requires several ancillary systems to address specific operational needs, including Taxation, Utility Billing, Enterprise Land Management, Budgeting, and Time and Attendance. These systems may be delivered as standalone, best-of-breed solutions or as modules within a comprehensive system. Regardless of their form, ancillary systems must seamlessly integrate with the County's ERP and HCM systems to ensure a fully unified enterprise suite.

Budgeting System

The County envisions implementing an integrated Budgeting System that will streamline the County's budget creation, monitoring, and amendment processes by integrating grants and capital improvement planning (CIP) into a unified, collaborative platform. With connections to the ERP, HCM, and Taxation systems, the Budgeting System will ensure accurate revenue projections, comprehensive expenditure tracking, and seamless workflows across all financial planning activities. Additionally, the Budgeting System will aid the County in position budgeting and will facilitate multi-year personnel cost forecasting.

Vendors should use the Dropbox link found below to download a folder containing the optimized Future-State "To-Be" workflows related to the ***ERP System***, including Budgeting workflows.

Shenandoah County - Future State BPMN - Finance

a) Budget Creation

- The future Budgeting System will provide standardized templates for departments to submit budget requests, incorporating operational expenses, grant budgets, and CIP project funding.
- Integration with the Taxation System will ensure property tax projections are included, while grant funding and CIP requests will be factored into the broader budget.

- CIP budget requests will link directly to project data, such as cost estimates, timelines, and funding sources, allowing departments to align operational and capital priorities seamlessly.

b) Approval and Proposal Process

- The system will allow collaborative review of all budget requests, including grants and CIP allocations, with role-based access for transparency and accountability.
- CIP requests will use ranking tools to prioritize projects based on criteria such as urgency, funding availability, and community impact, improving decision-making.
- "What-if" scenario tools will model the impact of grant availability, tax revenue, and CIP priorities on overall financial allocations, enabling data-driven adjustments during the review process.

c) Position Budgeting

- The future Budgeting System will support position-based budgeting, allowing departments to allocate salary and benefit costs based on authorized positions, vacancies, and projected staffing needs.
- Integration with the Human Capital Management (HCM) System will ensure real-time access to employee data, including salary structures, benefits, and position classifications, enabling accurate personnel cost projections.
- The system will provide scenario modeling tools to analyze the fiscal impact of personnel changes, such as new hires, promotions, salary adjustments, and workforce reductions.
- Position budgeting will incorporate grant-funded positions and special revenue-funded roles, ensuring proper tracking of funding sources and compliance with grant and regulatory requirements.
- The system will facilitate multi-year personnel cost forecasting, taking into account anticipated cost-of-living adjustments (COLAs), step increases, and benefits rate changes.

d) Adoption and Public Access

- The system will compile a comprehensive budget document that includes grant allocations, CIP priorities, and operational budgets for formal adoption.
- Budget data will be published online in a user-friendly format, providing clear breakdowns of grant funding and CIP investments to enhance transparency for stakeholders.
- Integrated workflows will reduce the time and effort required to prepare public-facing materials, ensuring consistent and accurate communication.

e) Amendments and Adjustments

- The Budgeting System will streamline grant amendment requests and reallocations, ensuring compliance with funding requirements while automatically updating financial records.
- CIP budget adjustments will be tracked within the system, with clear documentation of changes to funding sources, project timelines, and operational impacts.
- Automated workflows will ensure all amendments are approved, logged, and reflected in real-time financial reports, reducing administrative delays.

f) Monitoring and Reporting

- The system will offer real-time dashboards for tracking operational budgets, grant expenditures, and CIP project progress, providing departments with actionable insights.
- Automated alerts will notify departments of grant reporting deadlines, unspent allocations, and CIP project milestones, ensuring timely compliance and resource utilization.
- Historical budget data, including grant performance and CIP outcomes, will be archived for audits, compliance checks, and long-term financial planning, enabling greater accountability and transparency.

Time and Attendance System

The County envisions implementing an integrated Time and Attendance System that will serve as a unified platform for tracking employee work hours, managing leave, and calculating payroll data across all departments. The system will integrate seamlessly with the payroll module of either the ERP system or the HCM system, assuming full interoperability to ensure accurate records, efficient workflows, and consistent data across platforms. Public safety integrations with Vector Scheduling and PowerDMS (PowerTime) will address the specialized needs of Fire & Rescue, ECC, and the Sheriff's Office, enabling precise tracking and payroll calculations.

Vendors should use the Dropbox link found below to download a folder containing the optimized Future-State "To-Be" workflows related to the ***HCM System***:, including Time and Attendance workflows.

Shenandoah County - Future State BPMN - Human Resources

a) Timekeeping and Timesheet Management

- The future Time and Attendance System will allow employees to log hours, overtime, and leave through a centralized platform accessible from desktops or mobile devices.
- Employees will have the ability to submit corrections to their timesheets within an open pay period, streamlining the review process and reducing administrative delays.

- Public safety integrations with Vector Scheduling and PowerDMS (PowerTime) will ensure precise tracking of specialized hour codes, such as on-call, callback, and 24-hour shifts, supporting accurate payroll for Fire & Rescue, ECC, and Sheriff's Office personnel.

b) Approvals and Validation

- Departmental approvers will review and validate time entries and leave records directly in the system, supported by automated workflows that flag discrepancies for immediate resolution.
- The system will automatically calculate accruals for vacation and sick leave based on job roles, reducing manual calculations and ensuring compliance with organizational policies.
- Public safety approvers will benefit from pre-populated data from integrated scheduling tools, significantly reducing redundancy and approval time.

c) Payroll Integration

- The Time and Attendance System will integrate seamlessly with the payroll module of either the ERP or HCM system, ensuring consistent and accurate payroll calculations.
- Automated accrual applications and payroll calculations will reduce errors and ensure timely payroll processing.
- Real-time synchronization between the Time and Attendance System and payroll will improve transparency, enabling Finance to generate accurate and up-to-date reports.

d) Reporting and Insights

- The system will provide real-time dashboards for tracking workforce metrics, such as hours worked, overtime, and leave utilization, enabling data-driven decision-making.
- Departments will have access to automated reports for compliance tracking and workforce management, reducing the time needed for audits and regulatory submissions.

Enterprise Land Management (ELM) System

The County envisions implementing an integrated Enterprise Land Management (ELM) System that will serve as a centralized platform for managing contractor licensing, permitting, inspections, and enforcement processes. The system will integrate with the County's ERP System for revenue tracking, GIS for spatial data management in permitting and inspections, and the Taxation System for property tax notifications, streamlining workflows and improving transparency.

Vendors should use the Dropbox link found below to download a folder containing the optimized Future-State "To-Be" workflows related to the ***ELM System***:

Shenandoah County - Future State BPMN - Enterprise Land Management

a) Contractor Licensing

- The future ELM System will allow contractors to apply for or renew licenses online, with integrated fee calculations and automatic credential verification through DPOR.
- Licenses will be issued electronically, and automated notifications will remind contractors of upcoming renewal deadlines.

b) Permit Application and Enforcement

- The future ELM System will enable applicants to submit permit applications through an online portal, ensuring complete submissions by requiring mandatory fields and minimizing duplicate data entry.
- Simultaneous workflows for plans review, zoning, and erosion/sediment approvals will be supported, with automated status updates and notifications to applicants.
- GIS integration will provide spatial data for zoning compliance, erosion/sediment review, and permit application tracking, improving accuracy and decision-making.
- Integration with the ERP System will automate revenue tracking for permit fees, ensuring seamless updates to financial systems.
- Enforcement actions, including stop-work orders, will be logged and tracked within the system, ensuring centralized documentation and follow-up.

c) Inspections

- The future ELM System will automate inspection scheduling, assigning inspectors based on geographic regions and workload.
- Inspection results will be recorded electronically and linked to the permit, with automated notifications for failed inspections and rescheduling options for applicants.
- GIS integration will enable inspectors to visualize parcel-specific data, such as zoning overlays, property boundaries, and site plans, directly within the system, supporting efficient field operations.
- Certificates of Occupancy will be generated digitally once all requirements are met.

d) Reporting and Analytics

- The future ELM System will integrate with the Taxation System to provide automated notifications for new permits and completed inspections, ensuring timely property tax adjustments.
- GIS integration will allow visualization of spatial data for reporting purposes, such as heat maps of zoning approvals and permit trends.
- Real-time dashboards will track key metrics for licensing, permitting, inspections, and enforcement.

- Automated compliance and performance reports will ensure adherence to regulations and improve decision-making.

Taxation System

The County envisions implementing an integrated Taxation System that will serve as a centralized platform to support the County's tax-related processes, combining the needs of the Commissioner of the Revenue and Treasurer's Office. By streamlining workflows, enhancing data integration, and improving accessibility, the system will ensure efficient and accurate management of property assessments, billing, collection, and reporting.

Vendors should use the Dropbox link found below to download a folder containing the optimized Future-State "To-Be" workflows related to the ***Taxation System***:

Shenandoah County - Future State BPMN - Tax Assessment and Billing

a) Property Assessment

- The future Taxation System will automatically integrate with the ELM system to notify the Commissioner of the Revenue when new real property requires assessment, eliminating delays and ensuring accurate valuation of all taxable properties.
- Ownership and plat changes will trigger real-time updates to the GIS system, ensuring accurate, synchronized property records and reducing manual data entry. This integration will improve timeliness and accuracy in assessments while enhancing decision-making with up-to-date parcel data.

b) Tax Billing

- The future Taxation System will fully automate tax billing, seamlessly sharing data between the system and the Commissioner of the Revenue's assessment tools to ensure accurate application of exemptions, deferrals, and abatements.
- Automated spool file generation for printing will save staff time and improve scalability for supplemental bills and notices. Integration with the ERP system will streamline financial reconciliation by automating journal entries for daily revenue reporting.

c) Payment Collection

- The future Taxation System will provide a unified platform for taxpayers to view, pay, and manage tax bills across all tax types, supporting counter payments, online payments, and lockbox systems with real-time integration for faster reconciliation.
- These improvements will reduce administrative workload, improve data accuracy, and enhance taxpayer satisfaction through user-friendly payment options and transparent workflows.

d) Delinquent Tax Collections

- The future Taxation System will automate delinquency notices and late fee applications, streamlining the identification and pursuit of unpaid accounts and leveraging predefined rules to initiate actions such as DMV stops or payment plans.
- Integration with the ERP system will improve reporting on delinquent revenues and tracking of collection progress, ensuring consistent enforcement of tax obligations and enhanced revenue recovery.

e) Tax Relief and Adjustments

- The future Taxation System will automatically apply exemptions, deferrals, and abatements based on predefined eligibility criteria, while also calculating and processing adjustments such as rollbacks and supplements with detailed audit trails for compliance.
- These enhancements will simplify administration, improve transparency, and ensure timely and accurate application of tax relief programs for eligible taxpayers.

f) Reporting and Forecasting

- The future Taxation System will provide real-time data on assessments, collections, and delinquencies through customizable dashboards, enabling quick generation of reports for audits and internal stakeholders.
- Integration with the budgeting system will provide accurate, dynamic revenue forecasts, supporting financial planning and enabling data-driven decision-making.

Utility Billing System

The County envisions implementing an integrated Utility Billing System that will streamline water, sewer, and septage billing processes, integrating seamlessly with Neptune360 for meter data collection and the ERP System for financial reconciliation.

Vendors should use the Dropbox link found below to download a folder containing the optimized Future-State "To-Be" workflows related to the ***Utility Billing System***.

Shenandoah County - Future State BPMN - Utility Billing

a) Customer Account Management

- The future Utility Billing System will enable customers to submit service requests, validate addresses, and pay connection fees through an online portal, with accounts automatically set up and assigned rates and billing cycles.
- Automated notifications will provide customers with portal login details, enhancing access to account management tools.

b) Meter Data Management

- The future Utility Billing System will integrate with Neptune360 via an API for real-time data collection and validation.
- Anomalous data, such as leaks or irregular usage, will trigger automated alerts to both the billing team and customers, enabling proactive issue resolution.

c) Billing and Payments

- The future Utility Billing System will calculate charges automatically, applying rates, discounts, and fees, and generate itemized invoices with usage data and history graphs.
- Customers will access bills through the portal, opt for paperless billing, or receive paper bills via BMS for mail delivery. Payments will update customer accounts in real-time and transfer financial data nightly to the ERP System for ledger updates and reconciliation.

d) Customer Service and Support

- The future Utility Billing System will allow customers to submit inquiries through the portal or hotline, routing requests to Utility Clerks for resolution.
- Field support requests will trigger automated technician dispatch, with real-time tracking updates for customers.

e) Reporting and Analytics

- The future Utility Billing System will generate real-time customer usage reports, financial summaries, and compliance documents, accessible via dashboards.
- Analytics capabilities will track consumption trends, revenue patterns, and operational performance to support decision-making.

VI. ATTACHMENTS

Shenandoah County, VA

1. System Requirements

Please use the Dropbox links found below to download a Microsoft Excel version of the ***Requirement Traceability Matix (RTM)*** containing the System Requirements for each requested Enterprise Software System that they are submitting a proposal for. Vendors are required to respond to the questions within each RTM of interest in the native Excel format provided (.XLSX) in accordance to the guidelines provided in the spreadsheet. Vendors will then submit their completed response to each RTM with their electronic submission. Completed RTM's will be used by the County to determine the fit of the vendor's proposed solution to Shenandoah County's requirements. Failure to complete and submit an electronic version (Microsoft Excel workbook format) of an RTM for each Enterprise Software System of interest will result in the vendor being disqualified from the RFP evaluation process.

- **Financial Enterprise Resource Planning (ERP) System**
  If the vendor is proposing a stand-alone, best-of-breed Budgeting system, the vendor must include their responses to the Financial ERP System RTM in their proposal.
  Shenandoah - Requirements Traceability Matrix - Finance

- **Human Capital Management (HCM) System**
  If the vendor is proposing a stand-alone, best-of-breed Time and Attendance system, the vendor must include their responses to the HCM System RTM in their proposal.
  Shenandoah County - Requirements Traceability Matrix - Human Resources

- **Enterprise Land Management (ELM) System**
  Shenandoah County - Requirements Traceability Matrix - Enterprise Land Management

- **Taxation System**
  Shenandoah County - Requirements Traceability Matrix - Tax Assessment and Billing

- **Utility Billing System**
  Shenandoah County - Requirements Traceability Matrix - Utility Billing

2. Client References

CLIENT REFERENCE & PROFILE: (CLIENT NAME, POPULATION, OPERATING BUDGET, EMPLOYEES, UTILITIES, ETC.)
CONTACT INFORMATION: (NAMES, PHONE NUMBER, EMAIL, ADDRESS)
CONTRACT VALUE: (IMPLEMENTATION FEES, SOFTWARE LICENSING, RE-OCCURRING SAAS FEES, ETC.)
ENTERPRISE SOFTWARE SYSTEM(S) IMPLEMENTED: (FINANCE, HCM, TAXATION, BUDGET, ELM, TIME TRACKING, UTILITY BILLING)
PROJECT SUMMARY: (IMPLEMENTATION DETAILS, PROJECT DURATION, PROJECT CHALLENGES, MAJOR ACCOMPLISHMENTS)

3. Vendor Proposal Identification Schedule

Vendors are required to identify which of the Enterprise Software Systems they are proposing. By completing the ***Vendor Proposal Identification Schedule***, vendors will clarify their proposal intent to Shenandoah County.

To identify the Enterprise Software System(s) of interest, each vendor must place an "**X**" on the line, which appears to the left of each designated Enterprise Software System within the scope of work for RFP 2025-002.

_____ Financial ERP System

- Purchasing / Procurement
- Accounts Payable
- Accounts Receivable
- Controlling | General Ledger
- Treasury | Cash Management
- Capital Projects
- Expense Reimbursement
- Fixed Assets
- Grants

4. Cost Proposal

Shenandoah County - Cost Proposal Template

VII. INFORMATION SECURITY REQUIREMENTS, DISASTER RECOVERY, AND DATA RETENTION

Information security is critical to protecting the sensitive data and operations of Shenandoah County. We are committed to ensuring the confidentiality, integrity, and availability of our information assets, particularly as cyber threats and compliance requirements continue to evolve. Vendors providing responses to this RFP demonstrate compliance with the following information security and recovery requirements: safeguard government data, maintain public trust, and comply with all applicable regulations. Prior to contract award, the vendor must have obtained compliance with the following information security requirements and after contract award. Failure to adhere to these security requirements will be deemed as a breach of contract.

1. Information Security Program and Compliance Requirements

The selected vendor must comply with all applicable federal, Commonwealth of Virginia, and local laws, as well as industry best practices, to ensure the security of all county data. The vendor must:

- Adhere to Shenandoah County's Information Security Program and all applicable security policies, standards, and procedures. The county's program is based on the National Institute of Standards and Technology (NIST) Cybersecurity Framework (CSF), which is implemented based on NIST 800-53 controls.
- Comply with the information security requirements of Shenandoah County's third-party vendor oversight program by ensuring that security controls are actively maintained and assessed. This program includes the following controls at a minimum and shall be maintained throughout the contract or as required by law:
    - For SaaS Solutions: Maintain SOC 2 Type II certification for any hosted environment and SOC 2 Type II certification or equivalent for the vendor solution. Proactively provide proof of certification annually to Shenandoah County at no charge.
    - For SaaS Solutions: The vendor must provide evidence, no less than annually, of penetration testing performed by an external qualified information security firm. External vulnerability scanning, while a potential portion of any penetration test, will not be considered in and of itself to comply with the penetration testing requirement. The evidence provided must show the results of the exercise, any risks identified, and the organization's planned or completed activities to address the risk.

- Maintain ISO 27001 certification or an equivalent industry-recognized security framework for the vendor. Proactively provide proof of certification annually to Shenandoah County at no charge.
- Provide timely communication and response to reasonable information requests for certification, audits, periodic inquiries regarding security controls, and other information security questions as needed at no charge.
- Participate in periodic locality-led security assessments and third-party risk management reviews.
- Be responsive to evolving security requirements and work collaboratively with Shenandoah County to meet any changing security challenges.

Additional Compliance Requirements by Service Module

- **Fiscal Systems**: The solution must be Payment Card Industry Data Security Standard (PCI DSS) compliant to protect payment card transactions. The vendor must provide an attestation of compliance annually.
- **Human Resources Systems**: The solution must be Health Insurance Portability and Accountability Act of 1996 (HIPAA) compliant to ensure the security and privacy of Protected Health Information (PHI) and provide attestation of compliance annually.
- **Taxation and Revenue Systems**: The solution must comply with IRS Publication 1075, ensuring the security of Federal Taxpayer Information (FTI), including access control, audit logging, and physical security measures. The vendor must provide an attestation of compliance annually.

Data Breach Notification

The vendor is expected to take reasonable precautions to prevent a data breach. In the event of a data breach, the vendor must take immediate and decisive action to mitigate risks, ensure transparency, and comply with all applicable legal and regulatory requirements. While not a conclusive list, the vendor must:

- Establish an incident response plan with the County to identify both the vendor and County activities performed during an incident to identify, contain, respond to, and remediate an issue affecting the locality's system instance or data.

- Notify Shenandoah County within 24 hours of discovering any potential or realized security breach impacting the County's data.
- Comply in the investigation, forensic analysis, and remediation efforts to address the breach without delay.
- At a minimum, work with the County to comply with the Cyber Incident Reporting Law (Senate Bill 764) and the Virginia Consumer Data Protection Act (VCDPA) regarding breach notification and response requirements.
- The vendor shall maintain adequate cyber liability insurance coverage (described in detail in ***Section VIII - General Terms and Conditions***) for the duration of the contract, with limits appropriate to the scope of services provided. The County shall be named as an additional insured on the policy, and the vendor shall provide proof of coverage upon request and annually thereafter.
- Work with the locality to provide any necessary information security training that is unique to the vendor provided solution and allows users to full understand and utilize the security protections provided by the system.

2. Information Security Architecture, Technology, and Services Requirements

- Comply with external monitoring and penetration testing of the solution, as required by the locality.
- The vendor's solution should implement a comprehensive, defense-in-depth security architecture that aligns with industry best practices and regulatory requirements. At a minimum, the security architecture should include the following components:
  - **Identity and Access Management (IAM)**
    - Multi-Factor Authentication (MFA) and SAML Single Sign-On (SSO) for all user access.
    - Role-Based Access Control (RBAC) to enforce least privilege access.
    - Just-in-Time (JIT) and Time-Based Access Controls for administrative privileges.
    - Regular access reviews and audit logging of user activities.
  - **Data Protection and Privacy**
    - End-to-end encryption of data at rest and in transit using AES-256 and TLS 1.3+ protocols.

- Tokenization or anonymization for sensitive data where applicable.
- Data Loss Prevention (DLP) mechanisms to prevent unauthorized data exposure.
- Privacy-by-design principles ensuring compliance with applicable data protection laws, including VCDPA, HIPAA, PCI DSS, and IRS 1075 where applicable.

- **Network and Infrastructure Security**
  - Zero Trust Architecture (ZTA) principles applied across network and application layers.
  - Segmentation and micro-segmentation to isolate sensitive systems and data.
  - Intrusion Detection and Prevention Systems (IDPS) to monitor for and block malicious activity.
  - Web Application Firewalls (WAF) to protect against common web-based attacks such as SQL injection and cross-site scripting (XSS).
  - DDoS mitigation measures for all externally exposed services.
- **Secure Software Development and Application Security**
  - Secure Software Development Lifecycle (SDLC) with static and dynamic application security testing (SAST/DAST).
  - Regular vulnerability scanning and penetration testing for SaaS solutions.
  - Automated patch management to address security vulnerabilities promptly.
  - API security best practices, including OAuth 2.0, OpenID Connect, and rate limiting.
- **Security Monitoring and Incident Response**
  - Continuous security monitoring via a Security Information and Event Management (SIEM) solution.
  - Automated threat detection and response capabilities through Endpoint Detection and Response (EDR) and Extended Detection and Response (XDR).
  - Security operations center (SOC) support, either in-house or through a third-party Managed Security Services Provider (MSSP).
  - Incident Response Plan (IRP) that aligns with NIST 800-61 guidelines.
  - Participation in the locality's security incident response exercises as required.
- **Continuous Protection and Readiness**
  - The vendor's solution must be designed to adapt to evolving cybersecurity threats and comply with any new security requirements established by the locality over the course of the contract.

3. Disaster Recovery & Business Continuity

The vendor must have an established Disaster Recovery (DR) and Business Continuity (BC) Program with supporting plans to ensure minimal disruption of services in the event of system failures, cyberattacks, or natural disasters. The solution must have redundant backup solutions, including off-site and cloud-based backups that are separated geographically from any primary solutions by at least 100 miles.

- Regular testing of the DR/BC plan, with documentation of results and continuous improvement measures.
- Participate in Information Security Incident Response Exercises and Continuity Planning Exercises as needed. Depending on the effort, participation may be covered under a separate Service Order or Statement of Work (SOW), but the vendor agrees that all scope and pricing for participation will be reasonable.
- A communication strategy to inform the County of service disruptions and expected recovery timelines as required by the locality.
- Failover and redundancy measures to ensure continuous availability of critical systems that meet or exceed 99.999% uptime.
- Vendor participation in continuity planning exercises as needed, with terms addressed in a separate Service Order or Statement of Work (SOW), ensuring that scope and pricing remain reasonable.

4. Data Retention & Destruction

The vendor must comply with the Virginia Public Records Act (VPRA) § 42.1-76 et seq. and all other applicable regulations governing records retention and destruction. The vendor must:

- Maintain records for the legally required retention period, as defined by the Library of Virginia's Records Retention and Disposition Schedules.
- Implement secure disposal methods at the end of the retention period, including certified data deletion and physical destruction of storage media.
- Ensure that all backups and redundant copies of data are disposed of in accordance with retention policies and industry best practices.
- Provide the locality with the ability to retrieve, export, and verify the deletion of data upon request.

The vendor must submit documentation detailing their security controls, disaster recovery plan, and data retention policies as part of their proposal. The locality reserves the right to audit the vendor's compliance with these requirements.

1. Availability General Considerations for a Critical Financial Services System Vendor

A reasonable uptime requirement for a vendor-provided financial system should ensure high availability while accounting for necessary maintenance and unforeseen issues. A typical Service Level Agreement (SLA) for uptime would be:

1. Standard Uptime Requirement

- 99.9% uptime per month (commonly known as "three nines")
- This allows for no more than 43.2 minutes of downtime per month
- Recommended for most financial systems, ensuring reliability without excessive cost

2. Higher Availability Requirement (Mission-Critical Financial Systems)

- 99.95% uptime per month (approximately 21.6 minutes of downtime per month)
- Ideal for real-time financial processing systems with high transaction volume

3. Enterprise-Grade High Availability Requirement (Critical Government Financial Infrastructure)

- 99.99% uptime per month (no more than 4.32 minutes of downtime per month)
- Typically required for large-scale financial management systems supporting government operations

4. Scheduled Maintenance Considerations

- Maintenance windows should be pre-approved and occur during non-peak hours
- Vendors should provide at least 7 days' advance notice for scheduled maintenance
- Vendors should specify how hot failover, redundancy, and cloud-based scaling are handled to minimize downtime

5. Penalties for Downtime

- The vendor should provide Service Credits or penalties if uptime falls below the agreed level
- Reporting and transparency: The vendor must provide monthly uptime reports and real-time service status dashboards

2. Regular Service Check-Ins and Performance Reviews Requirements

To ensure ongoing service quality, compliance, and alignment with the locality's operational needs, the vendor shall participate in periodic service check-ins and performance reviews. These meetings and reporting requirements are intended to maintain accountability, assess system performance, and identify areas for improvement.

The vendor shall provide timely communication regarding system and management activities that impact the County's services. This can include but is not limited to, timely communication of system management or maintenance activities via the vendor's change management program. Outside of changes, the vendor must perform periodic service check-in meetings to review system performance, address outstanding issues, plan for scheduled downtime, and discuss future enhancements.

System Maintenance and Upgrades

As part of maintaining service reliability and transparency, the vendor must provide advance notice for all planned maintenance activities based on their level of impact:

- **Low-Impact Changes:** The vendor must provide at least five (5) business days' advance notice for low-impact changes. These are defined as maintenance activities requiring less than one hour of downtime after hours, with no potential impact on data integrity.
- **Moderate-Impact Changes:** The vendor must provide at least ten (10) business days advance notice for moderate-impact changes. These changes are defined as maintenance activities that result in one to four hours of downtime after hours or involve minor configuration adjustments that could potentially impact system performance but do not affect data integrity.
- **High-Impact Changes:** For high-impact changes, the vendor must provide at least thirty (30) days advance notice and coordinate closely with the County. These changes include any maintenance activities that impact data integrity or result in five (5) or more hours of service outages after hours.

By policy and practice, the County will not approve maintenance, which may impact the availability of the system or its data nor the overall user experience, to be performed during business hours. Business hours for the County are generally defined as Monday through Friday from 7:00 AM EST to 6:00 PM EST.

By adhering to these communication and coordination requirements, the vendor ensures that Shenandoah County has sufficient time to prepare for system maintenance activities while minimizing disruptions to critical operations.

Service Management Discussion and Periodic Check-In Meetings

To ensure ongoing service quality, accountability, and alignment with the locality's operational needs, the vendor must perform periodic service check-in meetings to review system performance, address outstanding issues, and plan for future enhancements. These meetings shall occur at a minimum on a quarterly basis, with additional meetings scheduled as needed based on service issues or major system updates.

- **Participants:** The vendor's assigned account manager, technical support lead, and security/compliance representative (as applicable).
- **Discussion Topics:**
  - System uptime, performance metrics, and SLA compliance.
  - Review of outstanding support tickets and resolution timelines.
  - Security updates, compliance status, and any new regulatory changes.
  - Roadmap discussions for upcoming software updates or feature enhancements.
  - Feedback from end users and recommendations for service improvements.
- **Meeting Documentation:** The vendor shall provide a summary report of each meeting, including key takeaways, action items, and agreed-upon resolutions.

These meetings will serve as a structured forum for collaboration, enabling the vendor and the County to proactively address challenges, enhance service delivery, and ensure continuous improvement.

Annual Performance Review

The vendor shall participate in an annual service review with the County to assess overall service effectiveness, contract adherence, and strategic alignment. This can be performed during a periodic service check-in meeting if needed. The review shall include at a minimum:

- Evaluation of Service Metrics:
  - Compliance with agreed uptime and availability SLAs.
  - Response and resolution times for support tickets.
  - Security posture, including compliance with SOC 2 Type II, ISO 27001, PCI DSS, HIPAA, IRS 1075, and other applicable standards.

    - Disaster recovery and business continuity effectiveness, including results of any failover testing.
- Review of Service Enhancements & Continuous Improvement:
    - Summary of system updates, patches, and security improvements.
    - Vendor-led training sessions or knowledge-sharing initiatives.
    - Identification of pain points or inefficiencies and proposed solutions.
- Compliance and Security Review:
    - Vendor shall provide evidence of adherence to required security controls, including annual penetration testing results, audit reports, and compliance documentation.
    - Review of security incidents and response effectiveness, including any required reporting under Cyber Incident Reporting Law (Senate Bill 764) and Virginia Consumer Data Protection Act (VCDPA).
- Strategic Roadmap Alignment:
    - Discussion of upcoming technology enhancements, version upgrades, or new functionalities.
    - Alignment of vendor capabilities with the County's evolving business needs.

Reporting & Documentation Requirements

The vendor shall provide the following reports electronically and be available for follow-up discussion as needed. Topics related to reports may be included as part of regular service check-ins and reviews:

- Monthly/Quarterly Reports:
    - System uptime and SLA adherence.
    - Ticket resolution statistics and outstanding issues.
    - Performance metrics and incident reports.
    - Compliance status updates.
- Annual Reports:
    - Comprehensive security compliance report or attestation of controls (SOC 2 Type II, ISO 27001, PCI DSS, etc.).
    - Detailed system health and risk assessment.
    - Summary of service improvements and recommendations.

Escalation & Remediation Process

- If service deficiencies, security concerns, or contractual non-compliance are identified during a service check-in or review, the vendor shall:
    - Provide a corrective action plan within 10 business days.
    - Work with the locality to implement remediation efforts promptly.
    - Participate in additional review meetings as necessary until the issue is fully resolved.

Failure to meet service obligations may result in penalties, service credits, or contract renegotiation based on non-compliance with SLAs.

VIII. GENERAL TERMS AND CONDITIONS

1. **General:**
    - **a.** Subject to the conditions, specifications, and instructions below, proposals will be received in person at the Shenandoah County Administration, 600 North Main Street, Suite 102, Woodstock, Virginia, 22664, until the time and date specified in the Request for Proposal.
    - **b.** The terms of this document shall form a portion of any contract between the County and the successful offeror, whether or not these terms are expressly incorporated into the contract form.
2. **Contents of Proposals:**
    - **a.** Unless the specifications expressly provide otherwise, where a brand or trade name appears in the specifications, it is understood that the brand or trade name referred to, or its equivalent, shall be furnished. If, however, the offeror proposes equivalent but not identical items, the offeror must furnish descriptive literature and full particulars for review, so that the Purchasing Agent may assure equivalence of items. If no mention is made of any exceptions, it is assumed that the Offeror is furnishing the article mentioned and not an approved equal, and he or she will be required to deliver the exact article specified.
    - **b.** Offeror shall submit with the proposal descriptive literature of the commodities, equipment, materials, supplies or services which he or she proposes to furnish, if such articles are other than the exact item specified.
    - **c.** Samples of items, if requested, shall be furnished by the Offeror without charge. Upon request, the samples will be returned at the Offeror's expense; otherwise, samples may be destroyed or consumed.

d. Time of proposed delivery shall be stated in number of calendar days. General terms such as "stock," "immediately," and "as soon as possible," may be cause for rejection. Unless otherwise specified, quote the earliest delivery date as it may be considered a factor in making an award.

e. The proposal, and any other documents required, shall be enclosed in a sealed opaque envelope.

f. Unless the RFP concerns professional services, the proposal shall state the Offeror's price, and the County will consider price in ranking the proposals.

3. Offeror's Representations:

a. Each Offeror, by submitting a proposal in response to this RFP, represents that the Offeror has read and understands the contract specifications and has familiarized himself with all federal, state and local laws, ordinances, rules and regulations that in any manner may affect the cost, progress or performance of the work.

b. The failure or omission of any Offeror to receive or examine any form, instrument, addendum or other documents, or to acquaint himself with conditions existing at the site, shall in no way relieve any Offeror from any obligations with respect to his proposal or to the contract.

4. Contractor's Registration:

a. Construction contractors are referred to Chapter 11 of Title 54.1 of the Code of Virginia, concerning residency issues, licensing issues, and evidence of licensure. Such contractors shall submit proper evidence of their registration, including their identification number issued by the Virginia State Corporation Commission or a statement why the contractor is not required to be so authorized.

5. Addenda:

a. If any party contemplating the submission of a proposal on this RFP is in doubt as to the meaning of any part of the plans, specifications or other documents, they should submit a written request for an interpretation thereof to the County. Typically, an interpretation of the contract specifications will be made only by addendum duly issued to each party receiving a RFP. Addenda will be available at the County offices and posted on the County's website for review by any interested party. The County will not be responsible for explanations or interpretations of contract specifications except as issued by addendum.

b. Any changes to the RFP and contract specifications will be in the form of a written addendum from the County, which shall be signed by the County Administrator or any duly authorized representative.

c. Each Offeror shall be responsible for determining that all addenda issued by the County for the RFP have been received before submitting a proposal for the work.

d. Each Offeror shall acknowledge the receipt of each addendum in his proposal.

e. All addenda will be posted on the County's website at: https://shenandoahcountyva.gov/bids. The County will also attempt to distribute addenda by email to potential offerors who submit questions or requests for information by email and/or provide an email address to the County. However, potential offerors are solely responsible for confirming receipt of all addenda by checking the County's website prior to submitting a proposal.

6. Taxes:

a. The successful Offeror shall pay all state, local, and federal taxes. Said taxes shall not be in addition to the contract price between the County and the successful Offeror, as the taxes shall be an obligation of the successful Offeror and not of the County, and the County shall be held harmless for the same by the successful Offeror.

7. Modification of Proposal:

a. A proposal may be modified or withdrawn by the Offeror any time prior to the time and date set for the receipt of proposals. The Offeror shall notify the County in writing of his or her intentions.

b. Modified and withdrawn proposals may be resubmitted to the Purchasing Agent up to the time and date set for the receipt of proposals.

8. Award of Contract:

a. The Purchasing Agent reserves the right to waive any informality in proposals and to reject any or all proposals.

b. The contract documents shall be subject to and governed by the laws of the Commonwealth of Virginia and the County of Shenandoah. Any dispute arising out of the contract documents, their performance, or their interpretation shall be litigated only in the Circuit Court of the County of Shenandoah, Virginia.

9. Insurance:

a. Unless expressly waived by the County, the successful Offeror shall maintain insurance to protect themselves and the County from claims under the Workman's Compensation Act, and from any other claim for damages for personal injury, including death, and for damages to property which may arise from operations under this contract, whether such operations be by the Offeror or by any subcontractor or anyone directly employed by either of them. Such insurance shall conform to the specifications of this section, or the requirements of applicable law, if greater.

b. The successful Offeror shall carry public liability insurance at least in the amounts specified below, including the contractual liability assumed by the contractor, and shall deliver Certificates of Insurance from carriers acceptable to the County specifying such limits, with the County named as an additional insured. In addition,

the insurer shall agree to give the County 30 days' notice of its decision to cancel coverage.

Worker's Compensation and Employer's Liability
Coverage A – Statutory Requirements
Coverage B – $1,000,000 Per Occurrence
Coverage C – $1,000,000/$1,000,000 Accident and/or Disease

All States Endorsement
Automobile Liability, including Owned, Non-Owned and Hired Car Coverage
Bodily Injury – $1,000,000 per person, $1,000,000 each occurrence

Comprehensive General Liability
Bodily Injury – $1,000,000 per occurrence, $2,000,000 annual aggregate
Property Damage – $1,000,000 per occurrence, $2,000,000 annual aggregate
Including Completed Operations/Products, Contractual Liability for Specified Agreement, Personal Injury, Broad Form Property Coverage.

c. The vendor shall maintain adequate cyber liability and technology errors and omissions insurance coverage in at least the amounts specified below for the duration of the contract, with limits appropriate to the scope of services provided. The County shall be named as an additional insured on the policy, and the vendor shall provide proof of coverage upon request and annually thereafter.

Cyber Liability - $5,000,000 annual aggregate
Technology Errors and Omissions – $5,000,000 annual aggregate

10. Successful Offeror's Performance:

a. The successful Offeror shall furnish all labor, materials and equipment necessary to fulfill the requirements of the contract in strict compliance with the terms, conditions, specifications and drawings of his proposal and the contract documents.

b. The successful Offeror agrees and covenants that his agents and employees shall comply with all Town, County, State and Federal laws, and rules and regulations applicable to the business to be conducted under the contract.

c. The successful Offeror shall ensure that his employees observe and exercise all necessary caution and discretion so as to avoid injury to person or damage to property of any and all kinds.

d. The successful Offeror shall cooperate with County officials in performing the work so that interference with existing County operations will be held to a minimum.

e. The successful Offeror agrees and covenants that he or she shall indemnify and hold the County and its employees and agents harmless against and from all liability, claims, damages and costs, including attorneys' fees of every kind attributable to bodily injury, sickness, disease or death or to damage to or destruction of property resulting from or in any manner arising out of or in connection with the project and the performance of the work under the contract, whether or not caused in part by a person or entity indemnified by this agreement.

f. In case of any contractual default of the successful Offeror, the County, after due notice may procure the goods and/or services detailed in the contract from other sources and hold the successful Offeror responsible for all damages including, without limitation, attorneys' fees and any other excess cost occasioned thereby.

11. Employment Discrimination by Contractor Prohibited:

a. During the performance of this contract, the successful Offeror agrees as follows:

(1) The successful Offeror will not discriminate against any employee or applicant for employment because of race, religion, color, sex, national origin, age, disability, or other basis prohibited by state law relating to discrimination in employment, except where there is a bona fide occupational qualification reasonably necessary to the normal operation of the contractor. The successful Offeror agrees to post in conspicuous places, available to employees and applicants for employment, notices setting forth the provisions of this nondiscrimination clause.

(2) The successful Offeror, in all solicitations or advertisements for employees or on behalf of the successful Offeror, will state that such contractor is an equal opportunity employer.

(3) Notices, advertisements, and solicitations placed in accordance with federal law, rule or regulation shall be deemed sufficient for the purpose of meeting the requirements of this section.

b. The successful Offeror shall include the provisions of the foregoing paragraphs of this section in every subcontract or purchase order of over $10,000 so that the provisions will be binding upon each subcontractor or vendor.

12. Drug Free Workplace:

a. During the performance of this contract, the contractor agrees to (i) provide a drug-free workplace for the contractor's employees; (ii) post in conspicuous places, available to employees and applicants for employment, a statement notifying employees that the unlawful manufacture, sale, distribution, dispensation, possession, or use of a controlled substance or marijuana is prohibited in the contractor's workplace and specifying the actions that will be taken against employees for

violations of such prohibition; (iii) state in all solicitations or advertisements for employees placed by or on behalf of the contractor that the contractor maintains a drug-free workplace; and (iv) include the provisions of the foregoing clause in every subcontract or purchase order of over $10,000, so that the provisions will be binding upon each subcontractor or vendor. For the purposes of this section, "drug-free workplace" means a site for the performance of work done in connection with a specific contract awarded to a contractor in accordance with these provisions, the employees of whom are prohibited from engaging in the unlawful manufacture, sale, distribution, dispensation, possession or use of any controlled substance or marijuana during the performance of the contract.

13. Compliance with Immigration Law:

a. The successful Offeror does not, and shall not during the performance of the contract for goods and services in the Commonwealth, knowingly employ an unauthorized alien as defined in the federal Immigration Reform and Control Act of 1986.

14. Authorization to Transact Business in Virginia:

a. An offeror organized as a stock or nonstock corporation, limited liability company, business trust, or limited partnership or registered as a registered limited liability partnership shall be authorized to transact business in the Commonwealth as a domestic or foreign business entity if so required by Title 13.1 or Title 50 of the Virginia Code or as otherwise required by law. Each such offeror shall include the identification number issued to it by the Virginia State Corporation Commission.

b. Any offeror that is not required to be authorized to transact business in the Commonwealth as a foreign business entity under Title 13.1 or Title 50 or as otherwise required by law shall include in its proposal a statement describing why the offeror is not required to be so authorized.

c. The successful Offeror shall not allow its existence to lapse or its certificate of authority or registration to transact business in the Commonwealth to be revoked or cancelled at any time during the term of the contract.

15. Compensation:

a. The successful Offeror shall be required to submit a complete itemized invoice on each delivery or service which he or she may perform under the contract.

b. Payment shall be rendered to the successful Offeror for satisfactory compliance with the terms, conditions and specifications of the contract and within forty-five (45) days after the receipt of the proper invoice.

16. Successful Offeror's Obligation to Pay Subcontractors:

a. The successful Offeror awarded the contract for this project shall take one of the two following actions within seven (7) days after the receipt of amounts paid to him by the County for work performed by his subcontractor(s) under the contract:

(1) Pay the subcontractor(s) for the proportionate share of the total payment received from the County attributable to the work performed by the subcontractor(s) under the contract; or

(2) Notify the County and subcontractor(s), in writing, of his intention to withhold all or a part of the subcontractor's payment with the reason for nonpayment.

b. The successful Offeror shall pay interest to the subcontractor(s) on all amounts owed by the contractor that remain unpaid after seven (7) days following receipt by the contractor of payment from the County for work performed by the subcontractor(s) under the contract, except for amounts withheld as allowed by subparagraph a(2) above. Unless otherwise provided under the terms of this contract, interest shall accrue at the rate of one percent (1%) per month.

c. The successful Offeror shall include in each of its subcontracts a provision requiring each subcontractor to include or otherwise be subject to the same payment and interest requirements with respect to each lower-tier subcontractor(s).

d. The successful Offeror obligation to pay an interest charge to a subcontractor(s) pursuant to the payment clause in this section shall not be construed to be an obligation of the County. A contract modification will not be made for the purpose of providing reimbursement for such interest charge and a cost reimbursement claim shall not include any amount for reimbursement for such interest charge.

17. Cancellation:

a. The County reserves the right to terminate the contract immediately (i) in the event that the successful Offeror discontinues or abandons operations; (ii) if adjudged bankrupt, or reorganized under any bankruptcy law; or (iii) fails to keep in force any required insurance policies or bonds.

b. Failure of the successful Offeror to comply with any section or part of its contract will be considered grounds for immediate cancellation of the contract by the County.

c. If the successful Offeror has not breached the contract but the County cancels it, the Offeror will be paid by the County for all scheduled work completed satisfactorily by the successful Offeror up to the termination date set in the written cancellation notice.

18. Governing Documents:

This procurement is subject to the terms of Chapter 43 of the Shenandoah County Code. Copies are available upon request**.**

19. Claims and Appeals:

All claims against the County and appeals of County decisions shall be made in strict accord with the County's Procurement Policy. Compliance with the policy is mandatory.

20. Cooperative Procurement:

As authorized in Section 2.2-4304 of the Code of Virginia, this procurement is being conducted on behalf of and may be used by public bodies, agencies, institutions, and localities of the Commonwealth of Virginia with the consent of the successful Offeror.

21. The County does not discriminate against faith-based organizations.

Certification:

In compliance with this Request for Proposal and to all the conditions imposed therein, including all attachments and addenda, and hereby incorporated by reference, the undersigned offers and agrees to furnish the goods/services in accordance with the attached signed proposal or as mutually agreed upon by subsequent negotiation. I certify that I have the authority to bind the corporation in contract.
